

U.S. Geological Survey  
**World Petroleum Assessment  
2000**

Compiled PowerPoint\* Slides

Thomas S. Ahlbrandt  
and The World Energy Assessment Team

U.S. Geological Survey  
Denver, CO 80225

U.S. Geological Survey Open-File Report 99-50-Z

## DESCRIPTION:

The slides in this compilation have been produced for a number of presentations on the World Petroleum Assessment 2000. Many of the figures are taken directly from the publication "U.S. Geological Survey World Petroleum Assessment 2000" - Description and Results: USGS Digital Data Series DDS-60, 2000. Some of the slides are modifications of figures from DDS-60, some are new descriptive slides, and a few are new slides. Several of the slides appear to be duplicates, but in fact are slight modifications of format or content from the same image.

Forty-one people participated in this effort as part of the World Energy Assessment Team. The full list of contributors is given on DDS-60.

Acknowledgements: Susan Walden, Timothy Klett, Ron Charpentier, Sandra Lindquist, Doug Steinshouer, and Gene Whitney kindly drafted several of the slides.

# USGS World Petroleum Assessment 2000

- History
- USGS World Energy Project
- Estimates--  
undiscovered resources  
& field growth
- Perspectives--  
onshore, offshore,  
OPEC / OECD
- Geologic insights
- Conclusions

# USGS World Energy Team

- Geologic Team
- 8 Regional Coordinators
- 76 Priority Provinces
- 52 Boutique Provinces
- 35 Geoscientists + other support
- Total Petroleum System write-ups (Standardized)
- Digital geologic maps--7 CD's released (only Europe remains)~ 50,000 distributed
- Internet site—heavily used
- Assessment Team
- 6 members
- Consistent review
- Record assessment digitally
- Truncated shifted lognormal (TSL) for field size (Monte Carlo), ASSESS (Analytic)--QC
- Triangular distribution for number of fields
- Assessment Form, Co-Products, Allocations
- FORSPAN--continuous

<http://energy.usgs.gov>

Contact: [ahlbrandt@usgs.gov](mailto:ahlbrandt@usgs.gov) 303-236-5776

# USGS WORLD ENERGY PROJECT

- 5 year project--1995-2000
- Reviewed by 1) AAPG, Core (Executive Committee approval), 2) World Energy Consortium—38 organizations—quarterly meetings, 3) NRC, 4) GIS World
- Assess recoverable conventional oil and gas resources of the World by 2000  
Theoremse DDS 60 at WPC--  
Calgary, 6/2000
- Use geologic basis (Province, Total Petroleum System and Assessment Unit)
- New assessment methodology for undiscovered and field growth
- Allocate to countries, onshore / offshore, OPEC, OECD, other
- All information is digital including geologic province maps, TPS write-ups --publication series (OFR 97-450, Bulletin 2200), <http://energy.usgs.gov>

# Assessment Process

- Identify geologic provinces, allocate resources, prioritize, identify "Boutiques"
- Database reality checks--Petroconsultants, Nehring, Geomark, proprietary; e.g. Iraq, FSU, industry
- Identify, map, and write-up Total Petroleum Systems (TPS) using a standardized format
- Geologic definition of TPS--define ASSESSMENT UNIT
  - Allocation, GIS support, grow field data, supporting data such as burial history curves
- Industry / other organization calibration
- Completion of data form (sizes and numbers)
- Geologic assessment meeting
- Resource calculation / dependencies
- Final review
- Digital publication for WPC--6/2000

# USGS World Petroleum Assessment 2000

- Undiscovered petroleum (Masters vs World w/o US. +5% at mean) 1556 BBOE vs 1634 BBOE
  - Undiscovered oil (649 BB; +20.5%)
  - Undiscovered gas (4669 TCF or 778 BBOE; -14.1%)
  - Undiscovered NGL (207 BBOE; +130%)

# USGS World Petroleum Assessment 2000

1. Summary of the USGS assessment process
2. Results, with implications for future world energy supply

# USGS World Petroleum Assessment 2000

- GOAL: ASSESS TECHNICALLY RECOVERABLE CONVENTIONAL OIL AND GAS RESOURCES OF THE WORLD EXCLUDING U.S.
- 5 YEAR PROJECT--1995-2000
- METHODOLOGY AND RESULTS THOROUGHLY REVIEWED BY CONSORTIUM PARTNERS (industry, government, associations)

# World Energy Consortium- Reviews, Quarterly Geologic Meetings, Many Visits

## INDUSTRY

- EXXON\*
- AMOCO\*
- MOBIL\*
- CONOCO
- PHILLIPS
- SHELL
- TEXACO\*
- ORYX
- PETRO-CANADA
- CHEVRON \*
- ENRON
- OCCIDENTAL
- KERR-MCGEE

## ORGANIZATIONS

- DEPARTMENT OF ENERGY
- ENERGY INFORMATION  
ADMINISTRATION
- INTERNATIONAL ENERGY  
AGENCY
- U.S. STATE DEPT., USAID
- DOD, "OTHER GROUPS"
- UNESCO
- PETROCONSULTANTS
- CENTRE FOR GLOBAL  
ENERGY STUDIES
- GEOMARK
- ESRI

\* Names subsequently changed via mergers and acquisitions

# USGS World Petroleum Assessment 2000

- 8 Regional Coordinators, 35+ geoscientists, 5 yrs.
- Digital geologic maps of the World: 8 regions
- 10 CD's released so far ~ 50,000 distributed
- Digital/GIS: Results allocated to countries, onshore / offshore, OPEC, OECD, other geographic entities
- Final report (DDS-60) = 32,000 pages, 900+ maps
- Internet site— <http://energy.usgs.gov>

# USGS World Petroleum Assessment 2000

- Uses geologic basis (not political) for Provinces, Total Petroleum Systems and Assessment Units
- Estimates of "UNDISCOVERED RESOURCES" are based on understanding of petroleum formation and accumulation processes
- Assessment extends to water depths of 2000 m
- This World assessment excludes U.S. (separate assessment process)

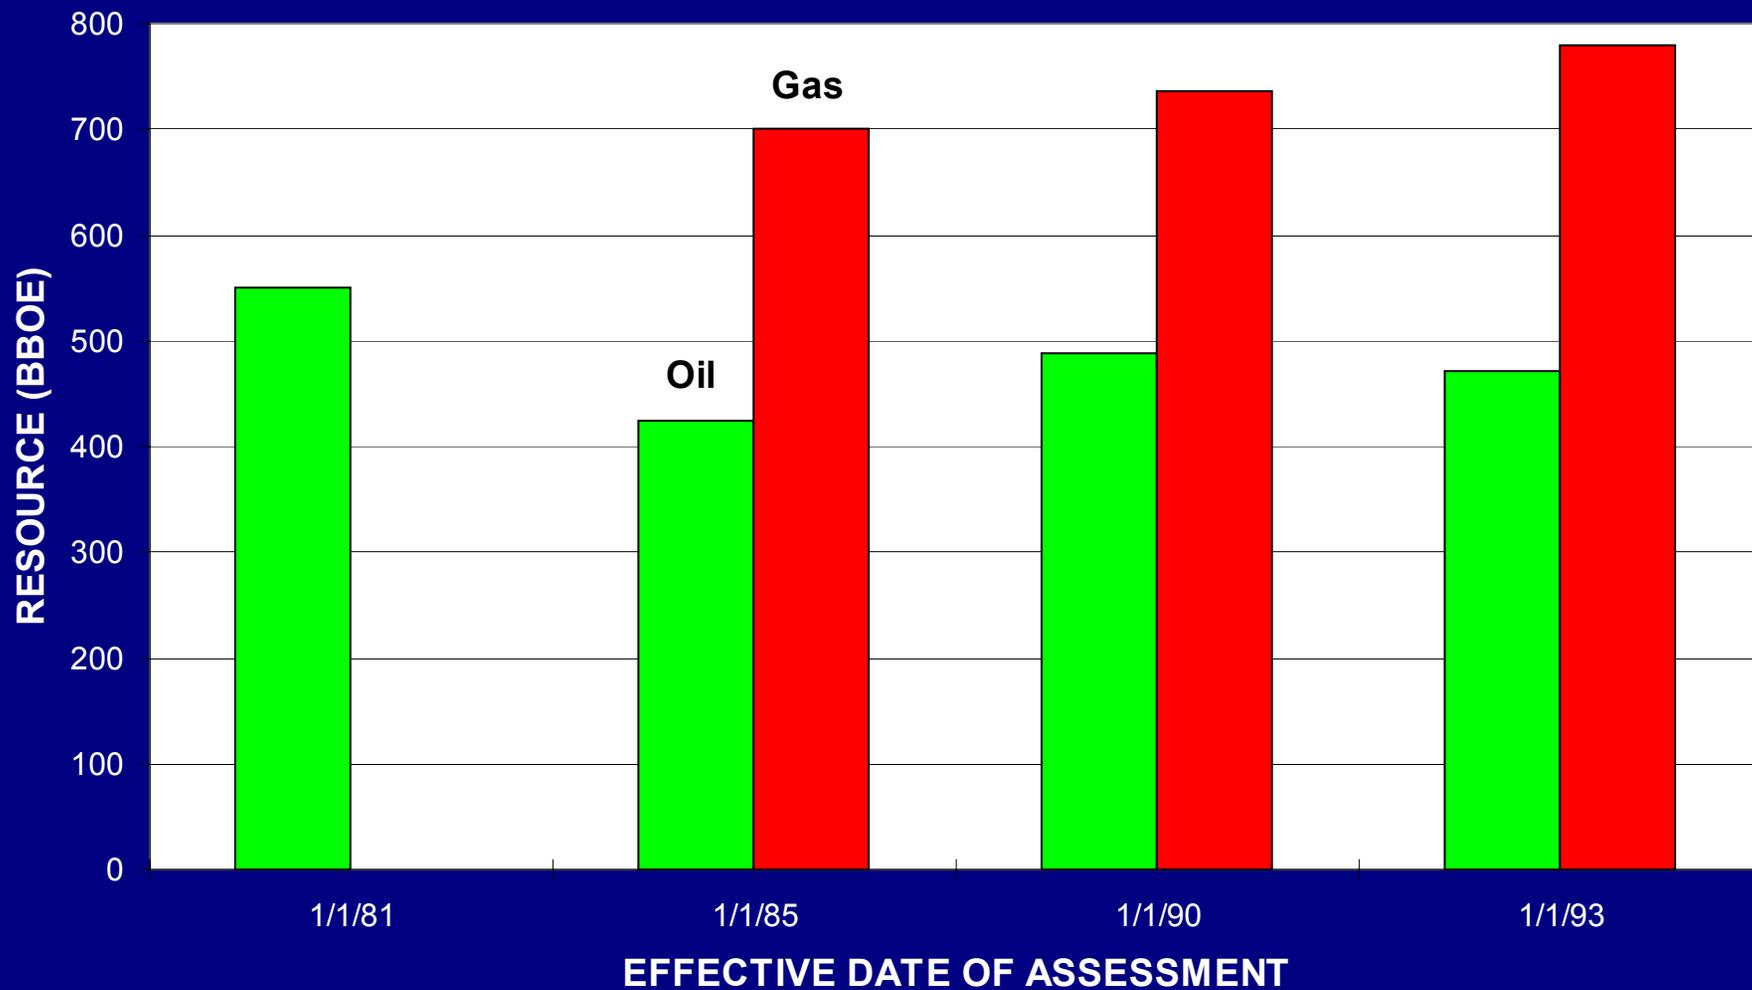

# USGS World Petroleum Assessment 2000

- 8 regions (similar to State Dept. economic regions)
- 1000 provinces defined geologically
- 406 provinces contain some oil and gas
  - 76 priority provinces assessed = 95% of past oil & gas production
  - 52 boutique provinces assessed = prospective
- 149 Total Petroleum Systems assessed
- 246 Assessment Units assessed

# USGS World Petroleum Assessment 2000

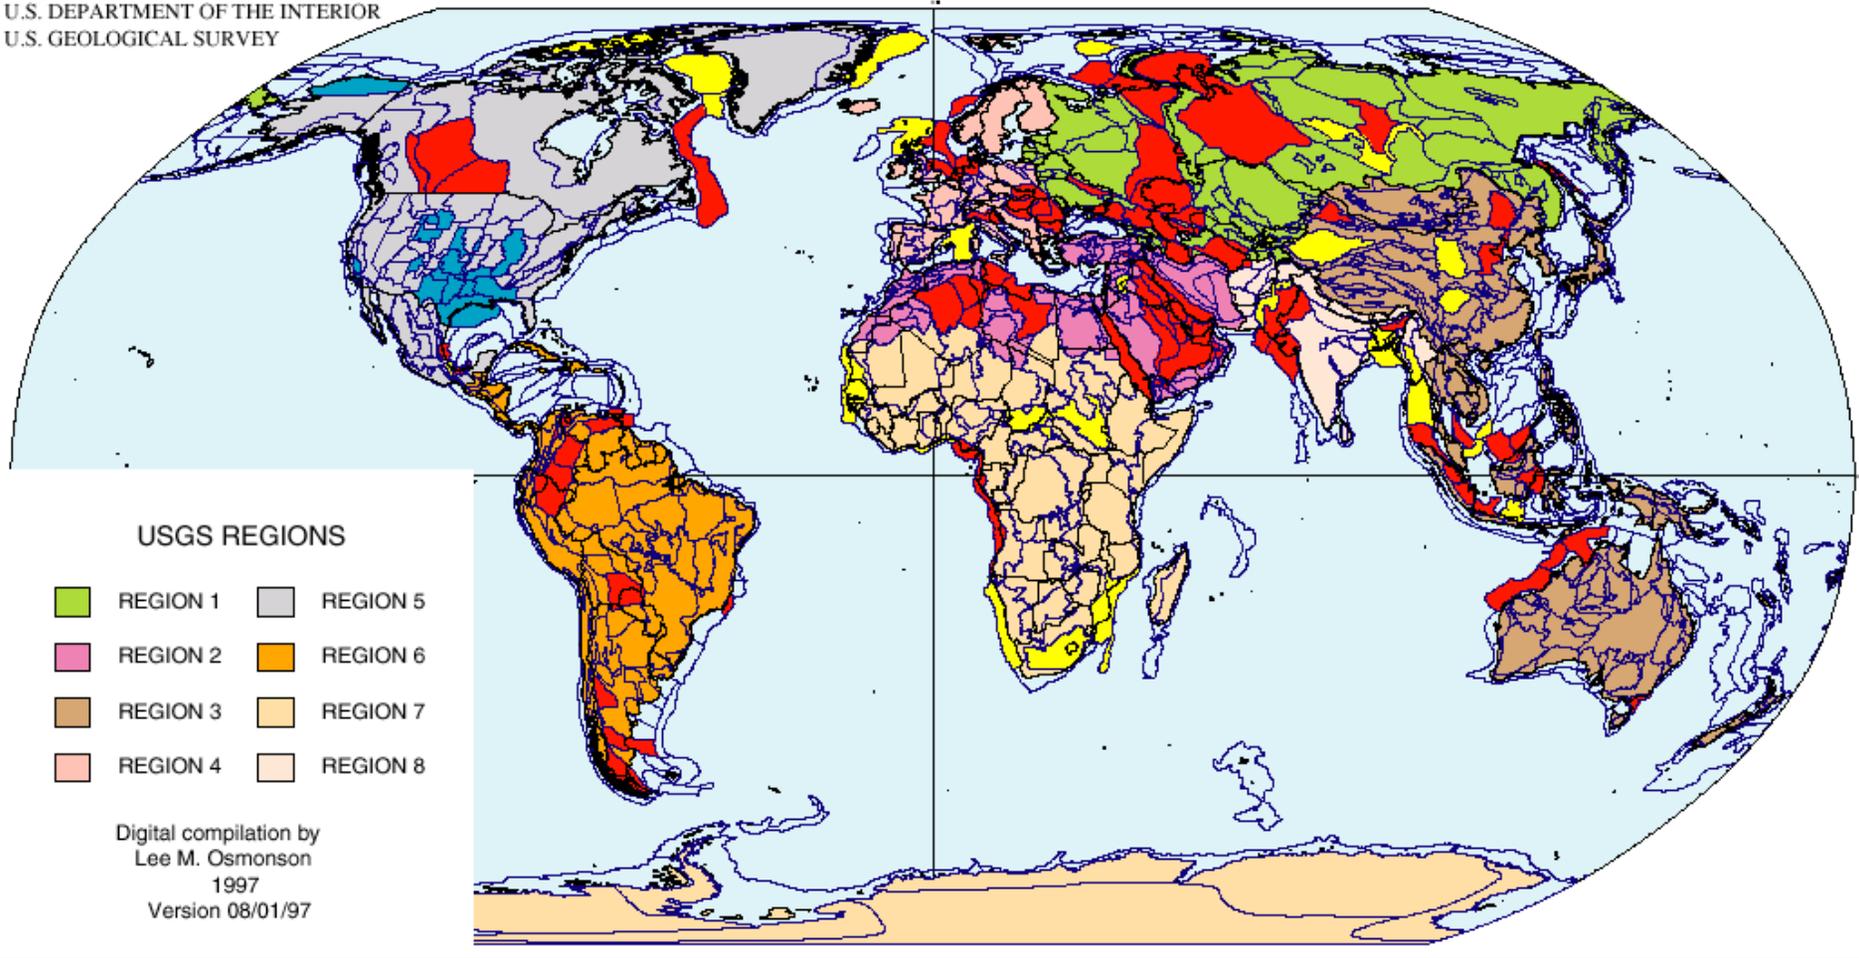

- Represents a “snapshot” in time based on current data - must be updated periodically
- Internally consistent - single assessment team using single process throughout
- Thoroughly documented - published summaries of all petroleum systems
- Results are probabilistic, not deterministic (distribution rather than single value)

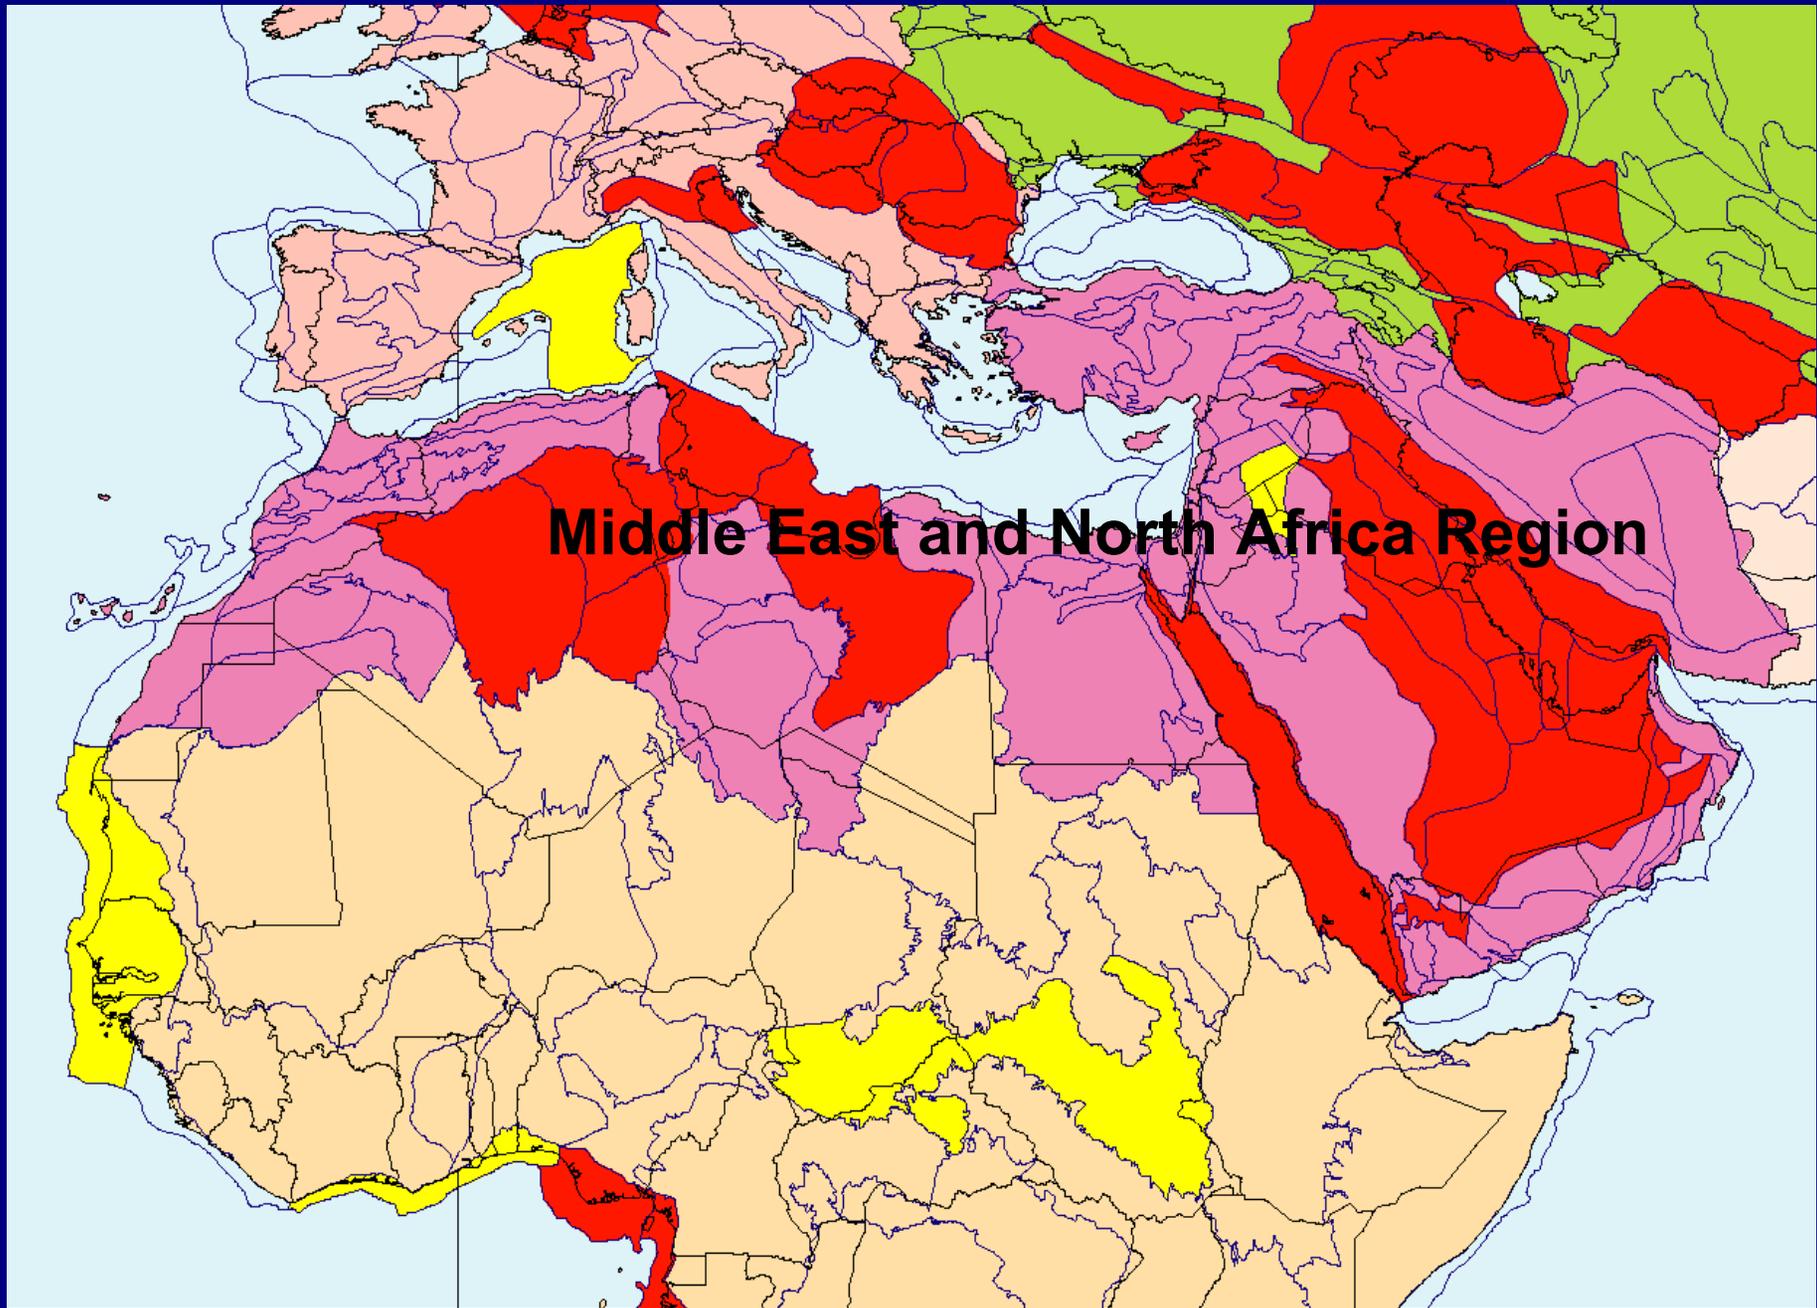

## Successive USGS Estimates of World Undiscovered Resources for Conventional Oil and Natural Gas

# THE VOCABULARY OF RESOURCE ASSESSMENT:

Cumulative production

Reserves

Reserve growth\*

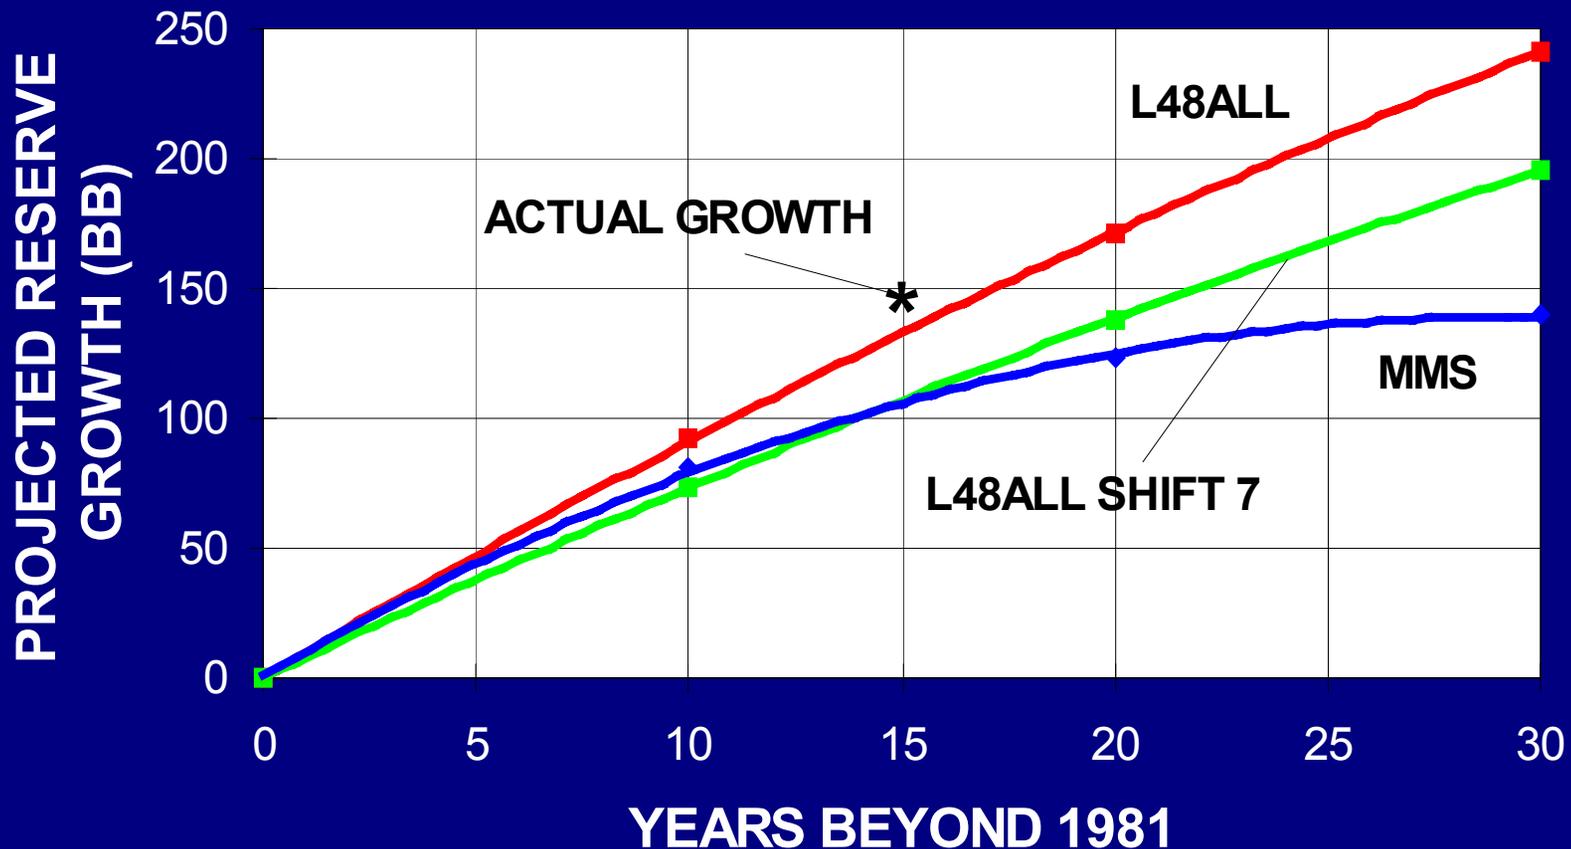

Undiscovered resources\*

Conventional\*

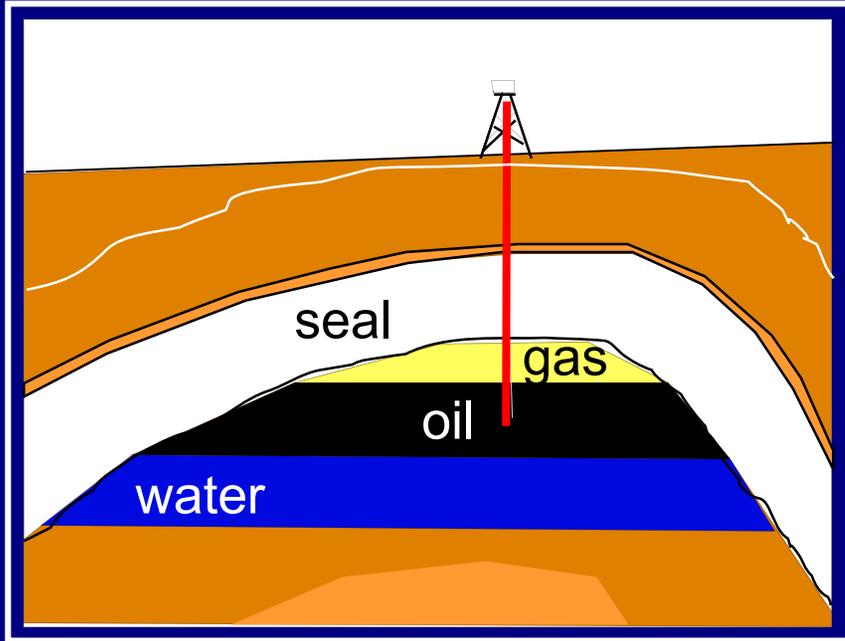

Unconventional (continuous)

\* This assessment

# RESERVE GROWTH HISTORY MATCHING: LARGE OIL FIELDS

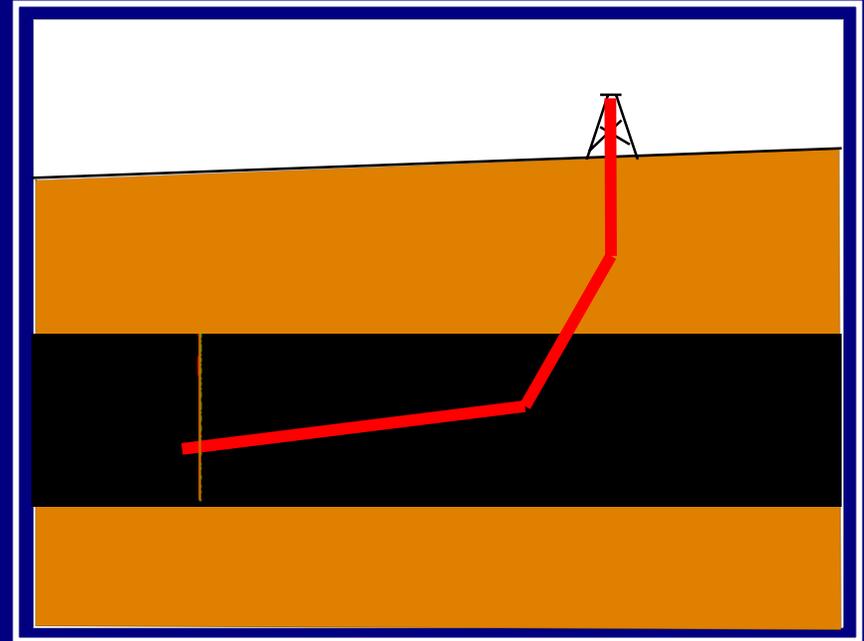

*Note: World Petroleum Assessment 2000 estimates reserve growth for world, not individual fields*

## Conventional

- Gas-oil-water column
- Pooled accumulation

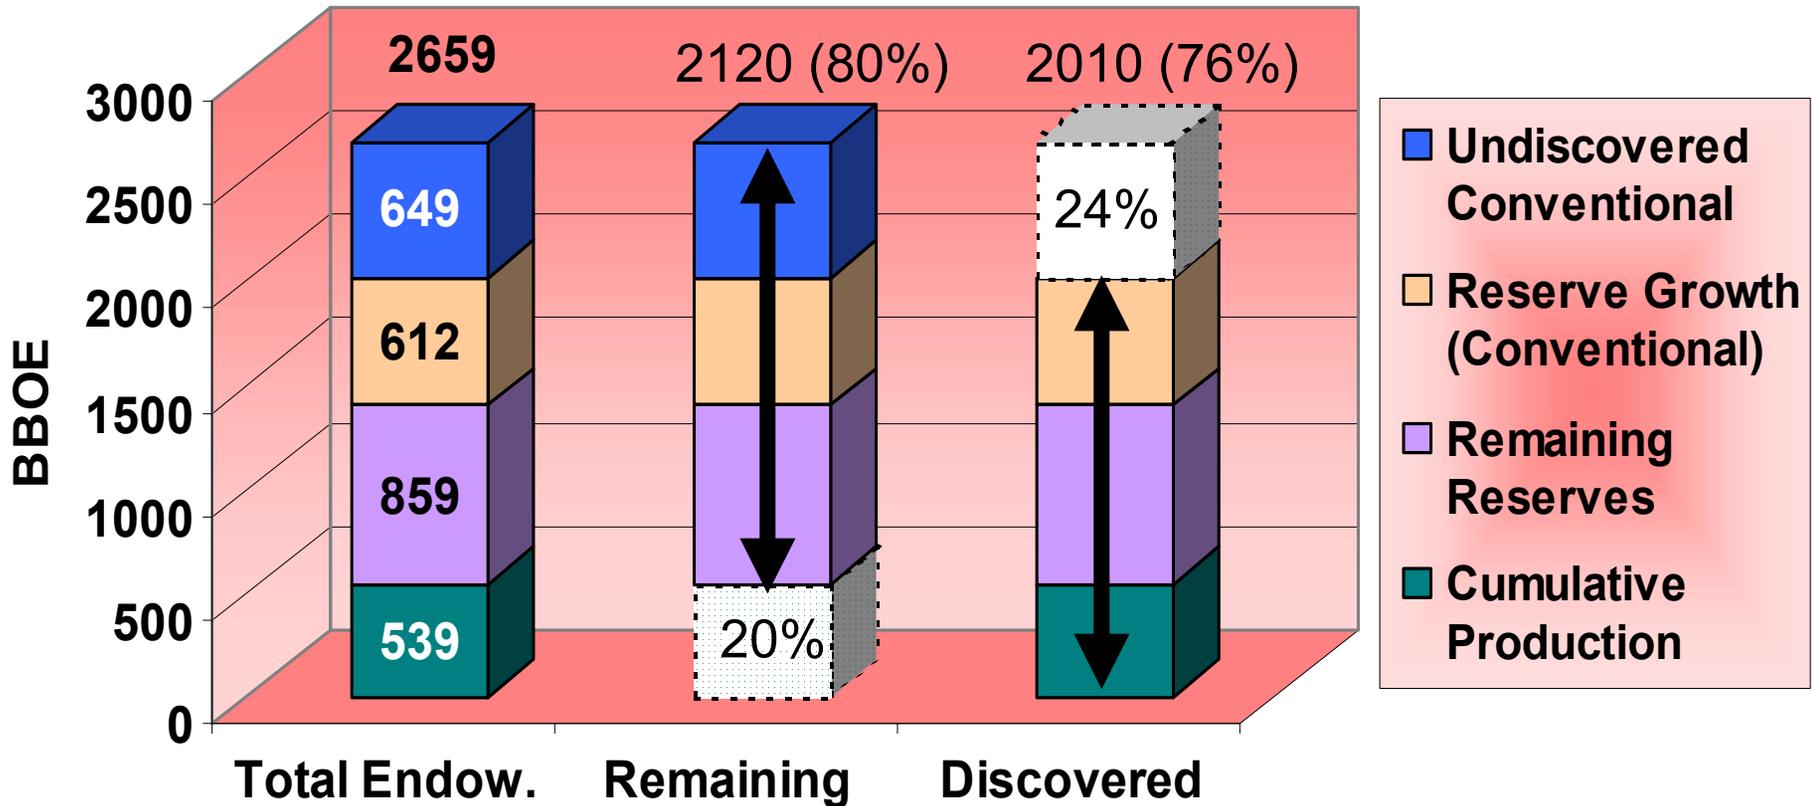

## Unconventional (continuous)

- No gas-oil-water column
- Distributed throughout rock
- Special production techniques
- Examples: tar sands, heavy oil, coalbed methane, oil shale, gas hydrates.

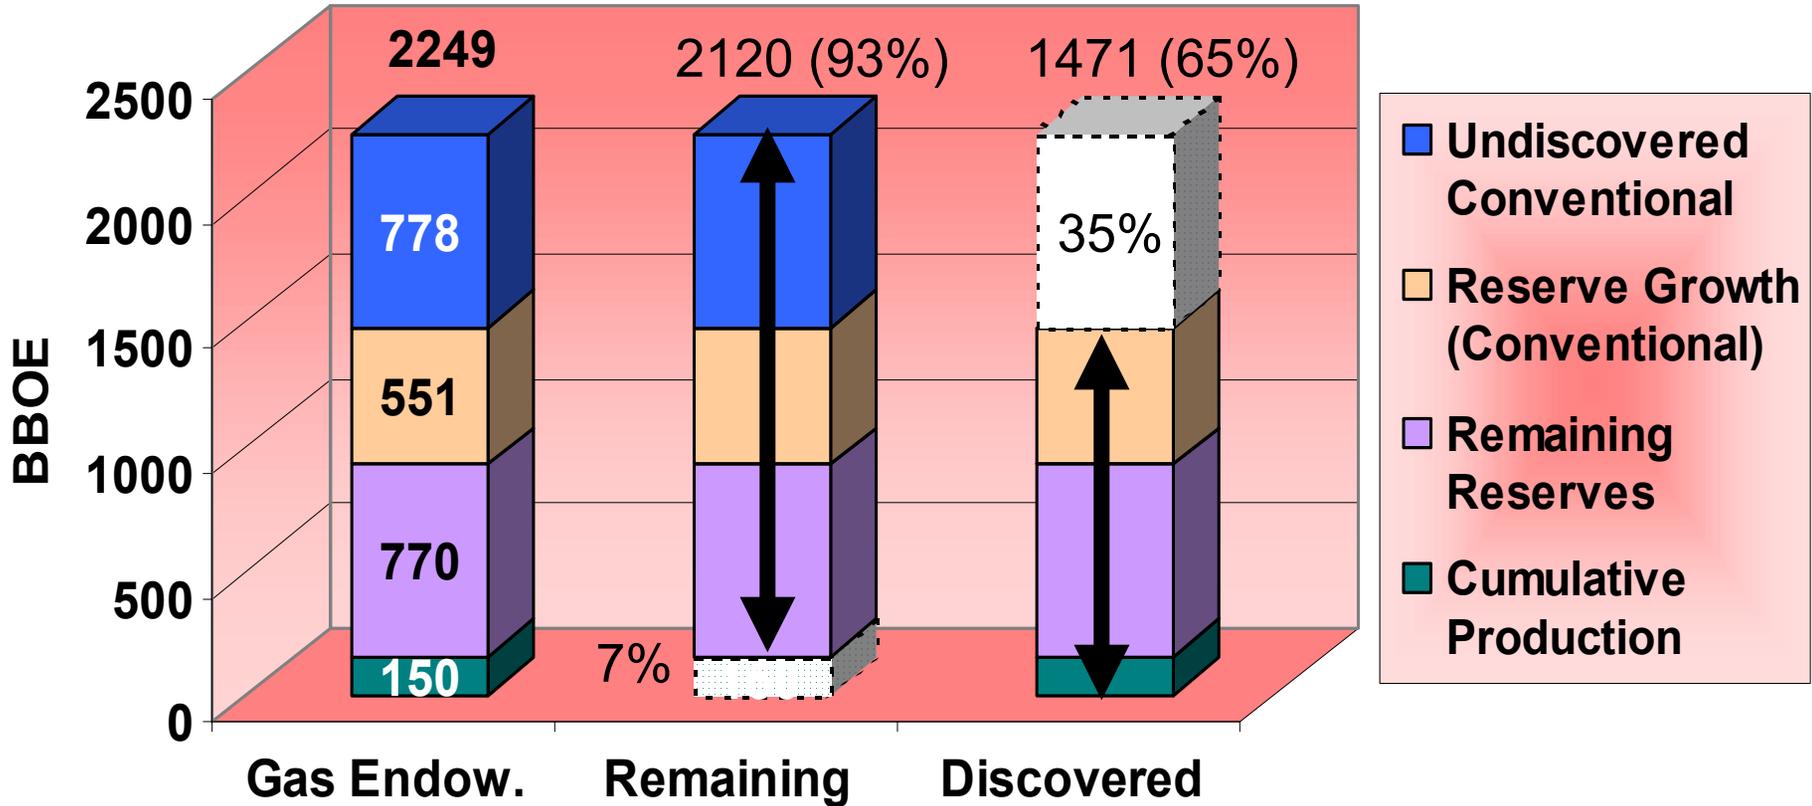

# USGS World Petroleum Assessment 2000

## OIL (excluding U.S., Billion barrels)

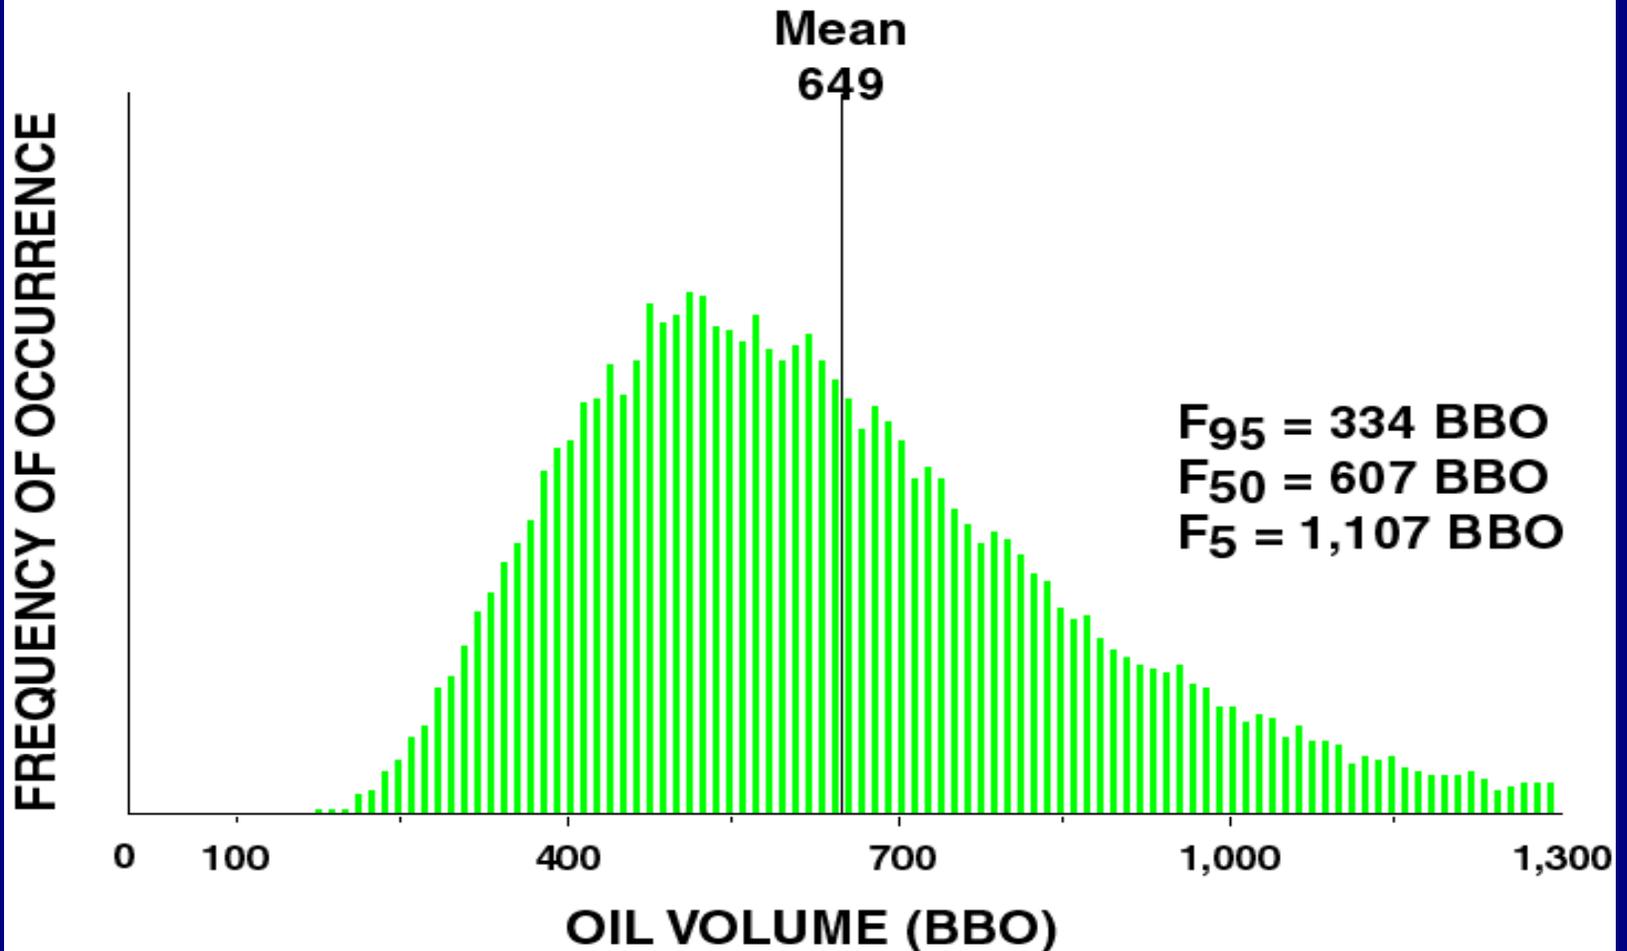

USGS World Petroleum Assessment 2000

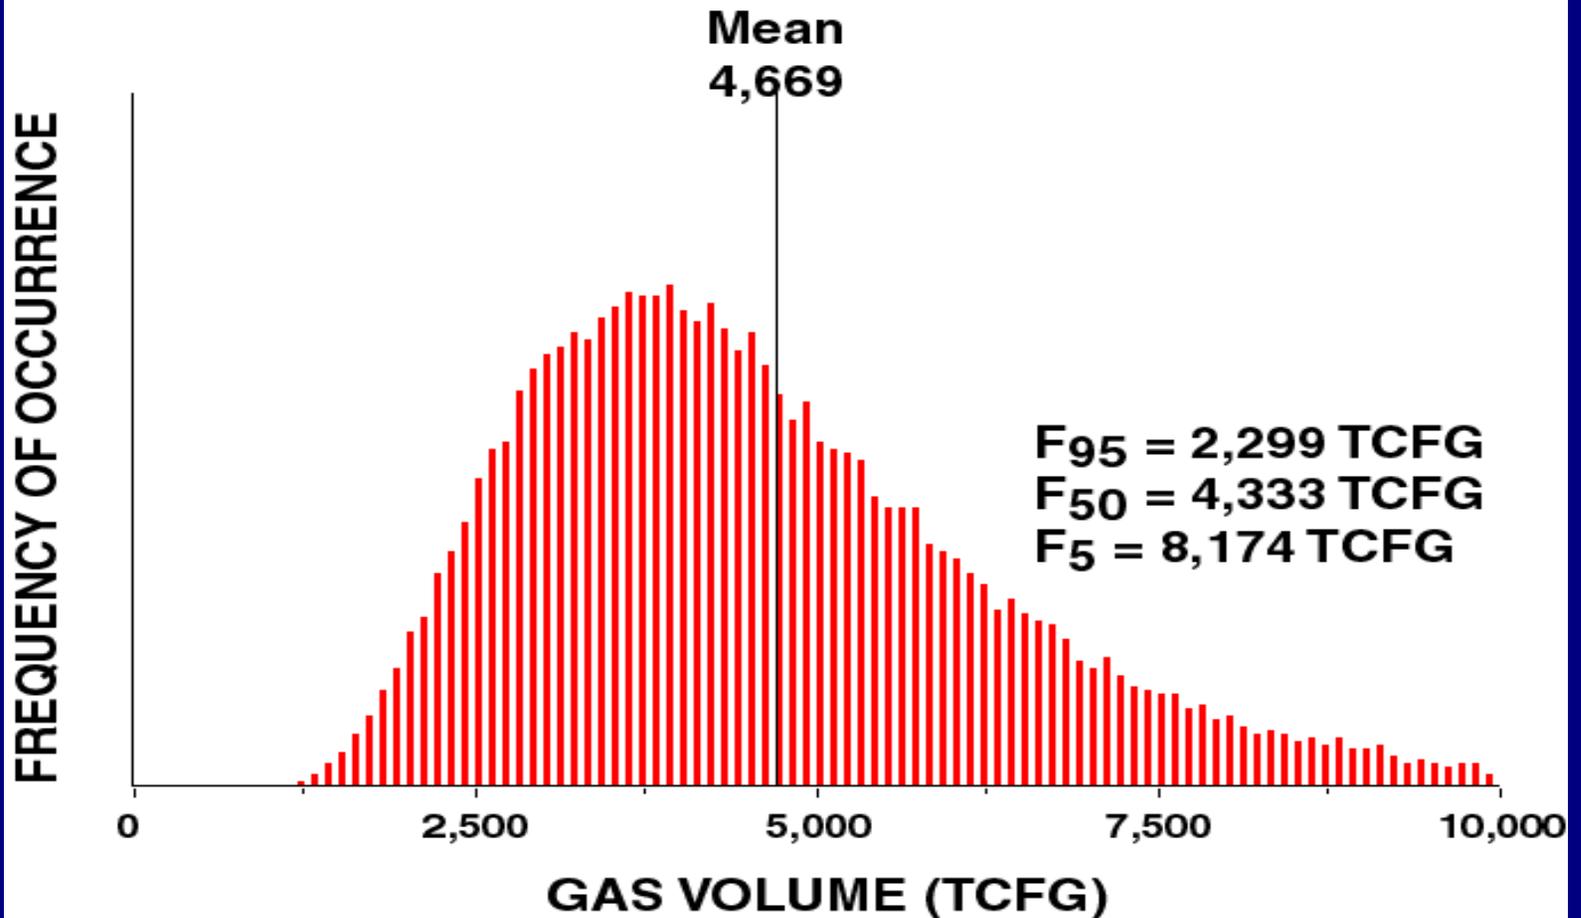

**GAS** (excluding U.S., Billion barrels oil equivalent [BBOE])

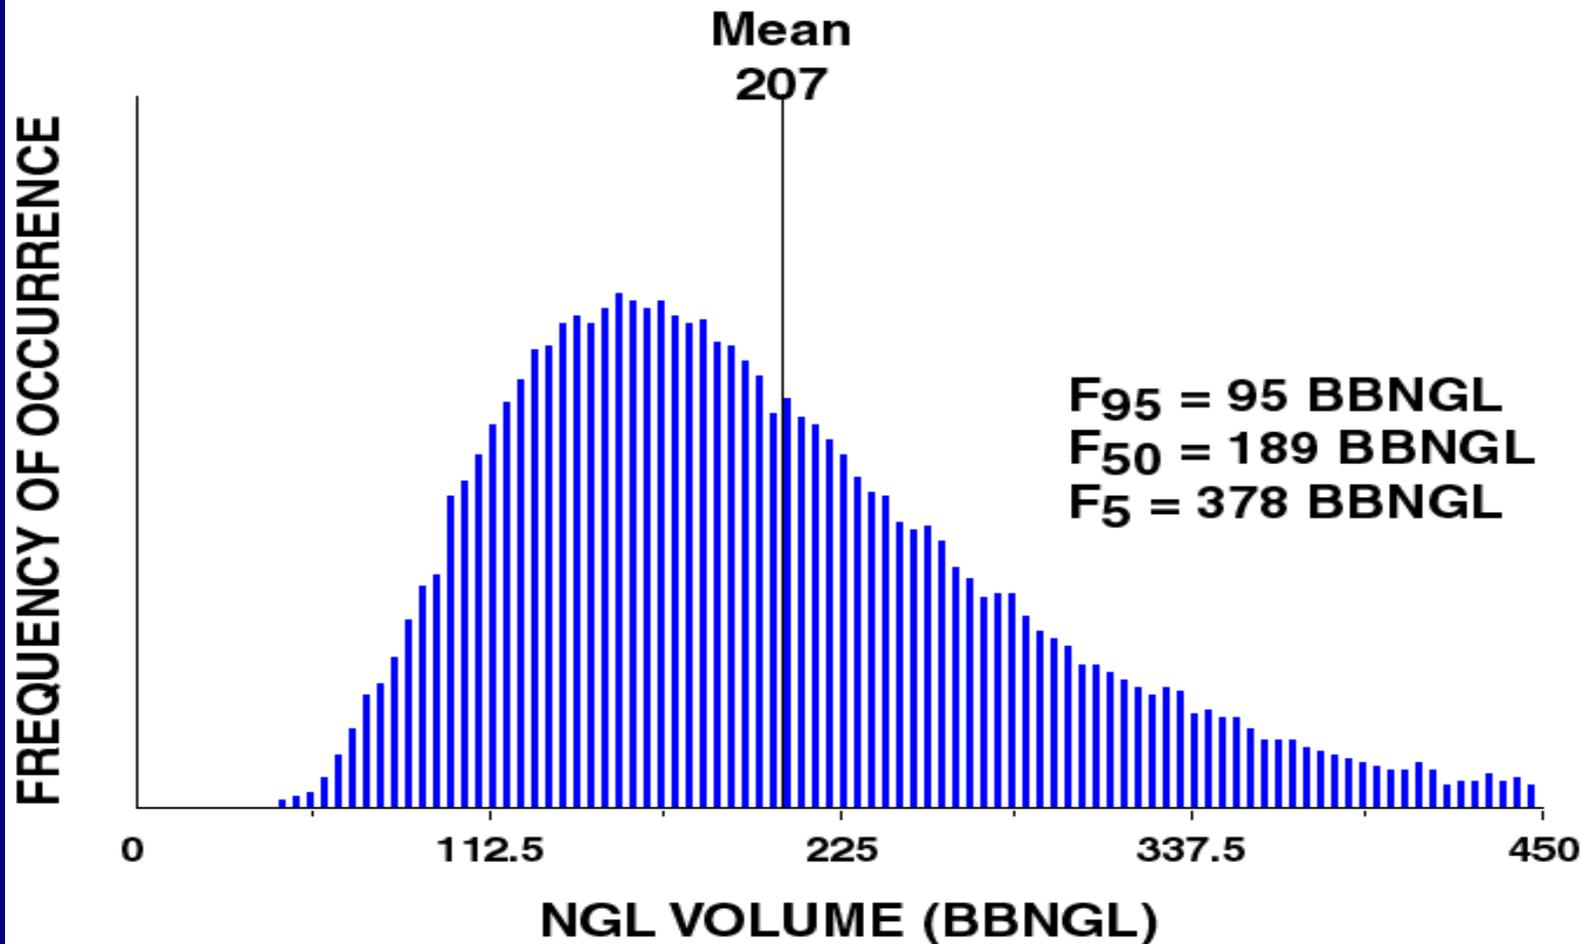

# World Undiscovered Petroleum Resources Oil

# World Undiscovered Petroleum Resources Gas

# World Undiscovered Petroleum Resources NGL

# Reserve Growth

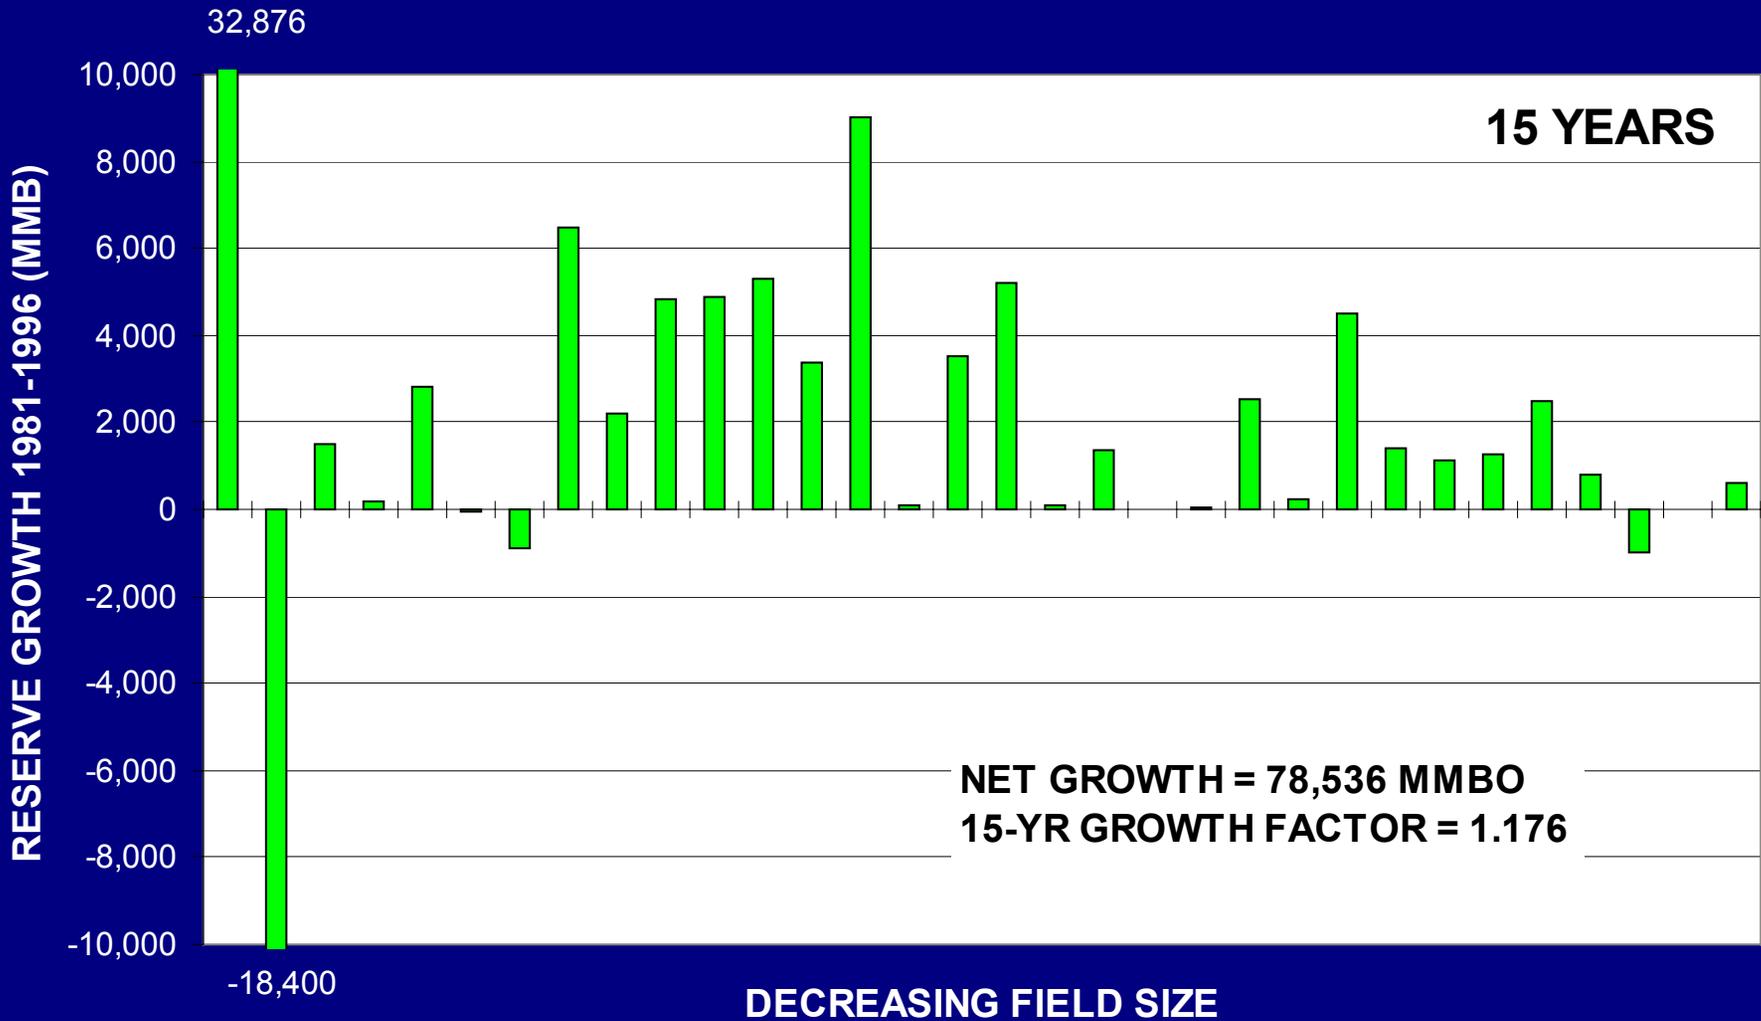

Definition: Reserve growth is the observed increase in reserves for a particular field over time. That is, the initial estimates of reserves in many fields is lower than the ultimate volume of oil produced from that field.

## Causes of reserve growth:

- Conservative initial estimates (SEC requirements, corporate psychology)
- Exploration technology (e.g., 3-D, 4-D seismic)
- Drilling technology (horizontal, multilateral, directional)
- Production technology (enhanced oil recovery)

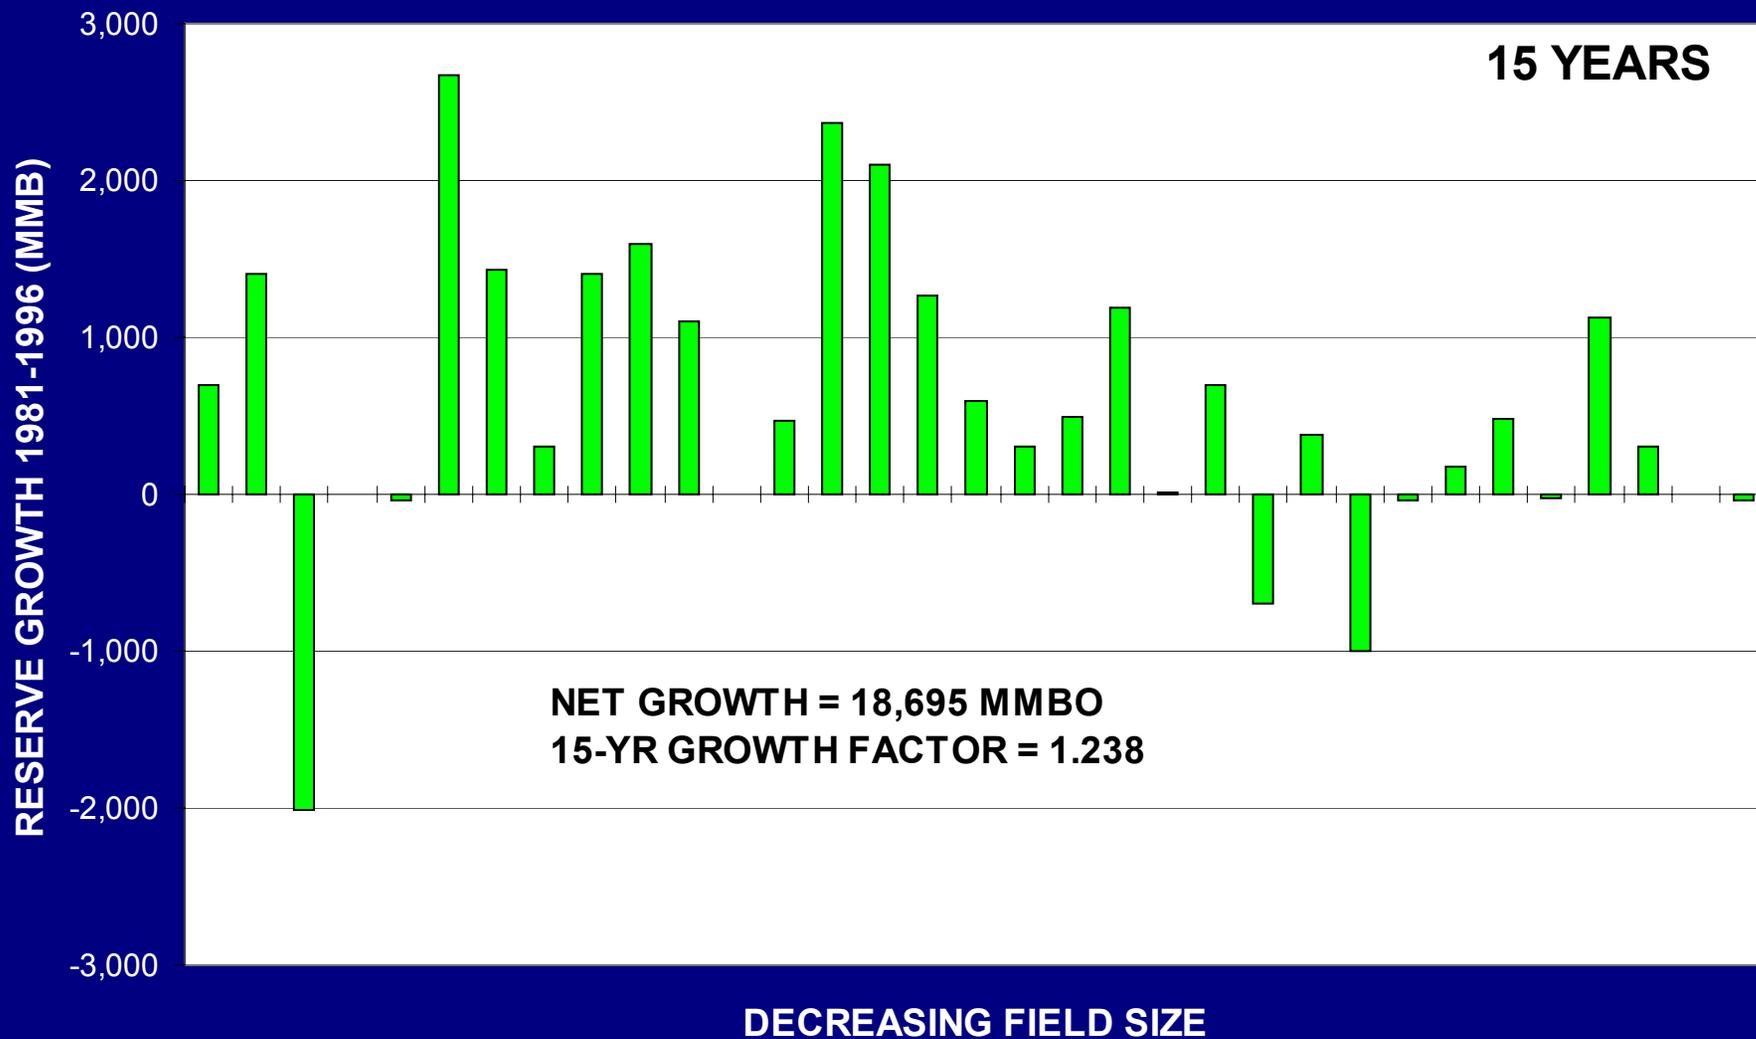

# RESERVE GROWTH OF WORLD'S LARGEST OIL FIELDS

## FIRST LARGEST GROUP (115,000 TO 5,000 MMB)

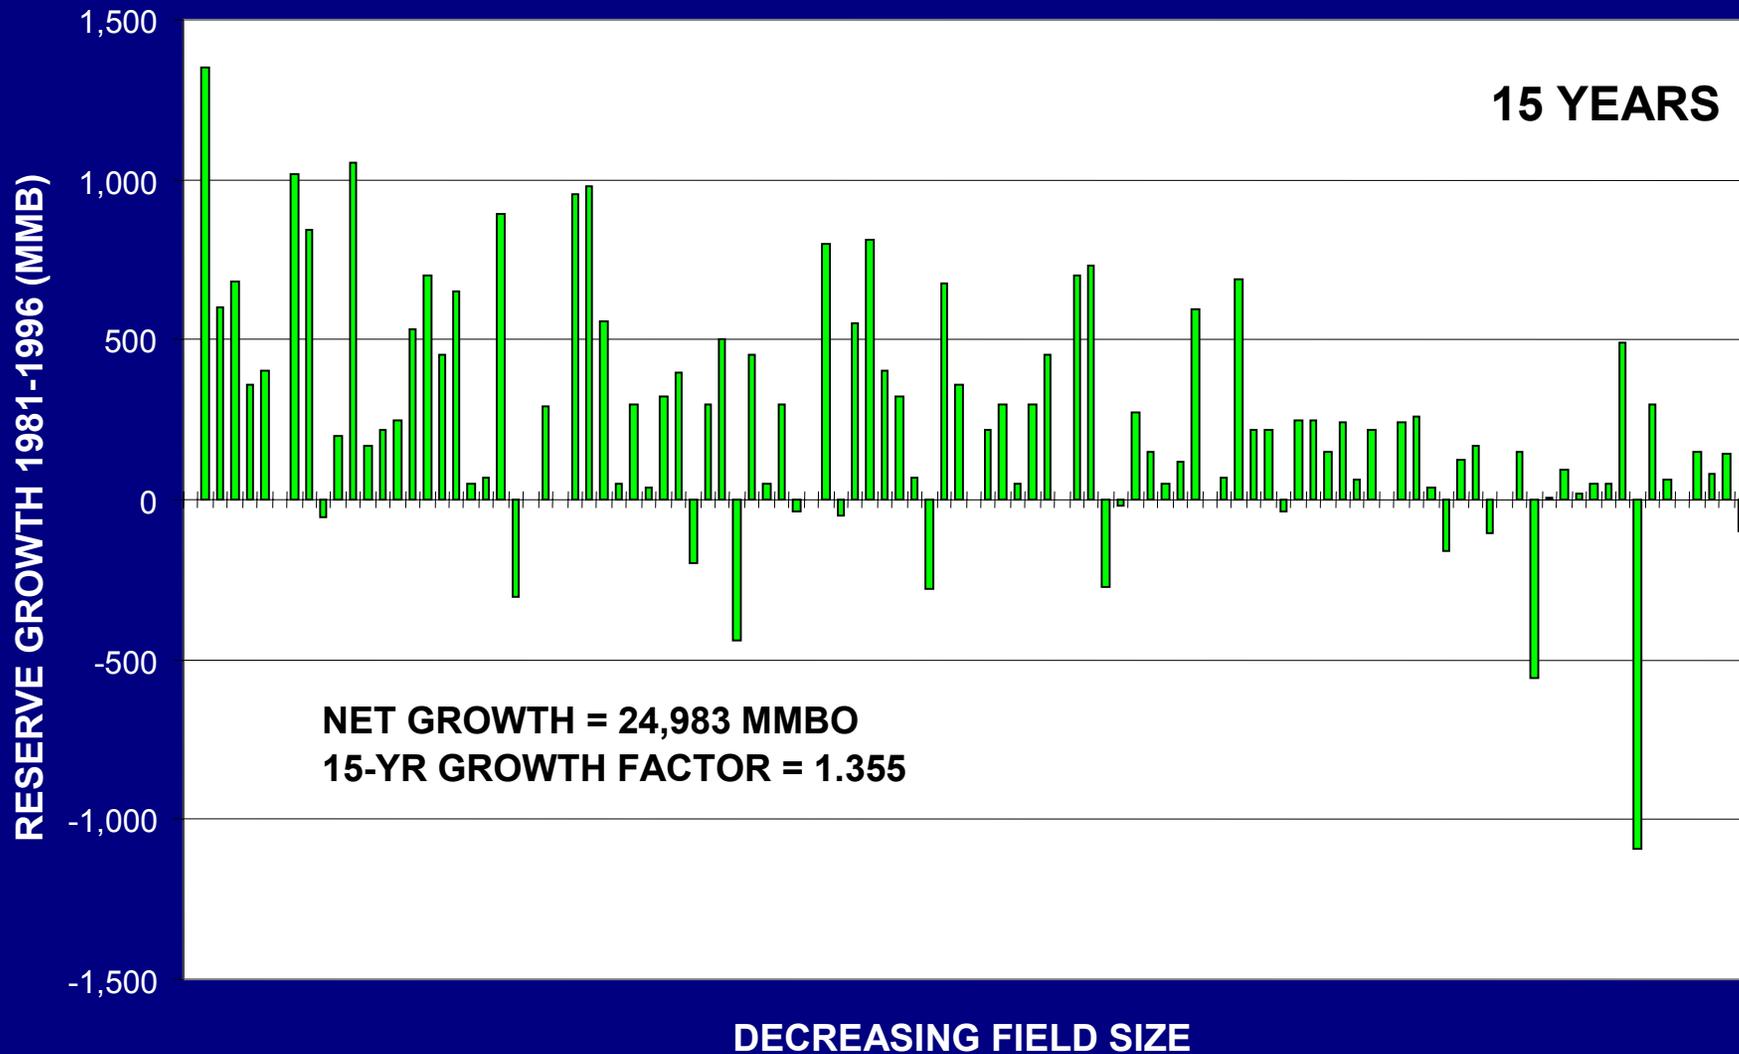

# RESERVE GROWTH OF WORLD'S LARGEST OIL FIELDS

## SECOND LARGEST GROUP (5,000 TO 1,800 MMB)

# RESERVE GROWTH OF WORLD'S LARGEST OIL FIELDS

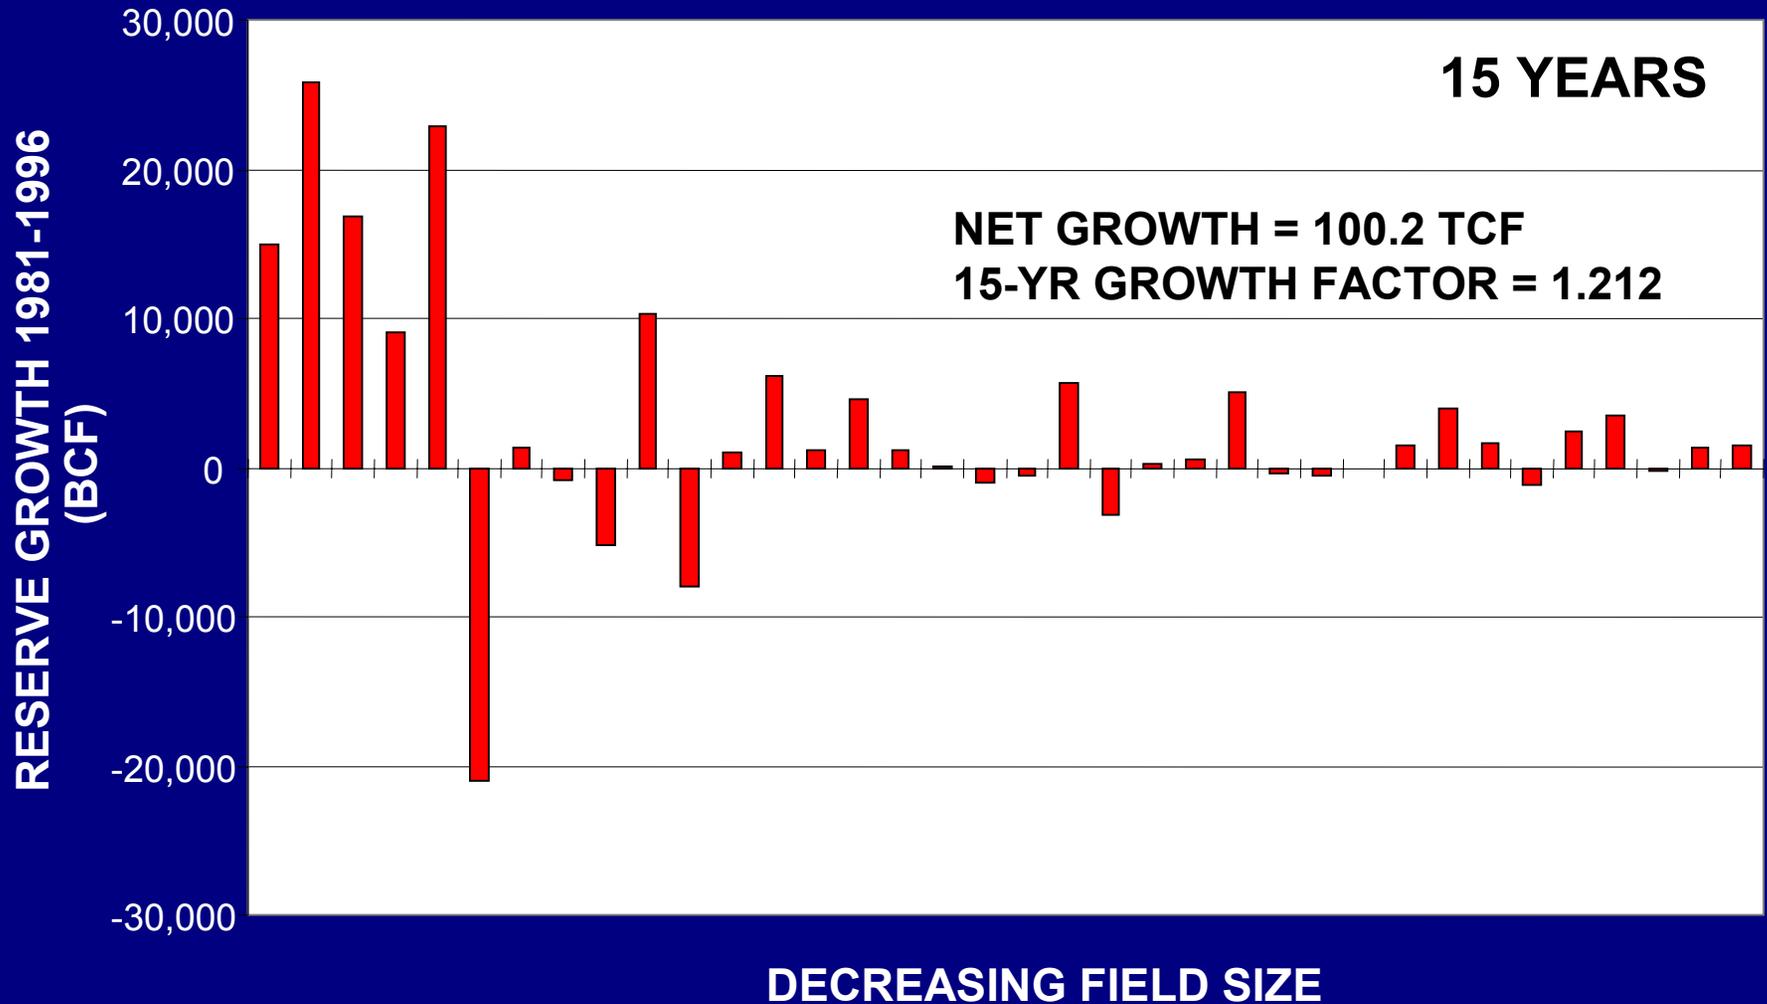

## THIRD LARGEST GROUP (1,800 TO 500 MMB)

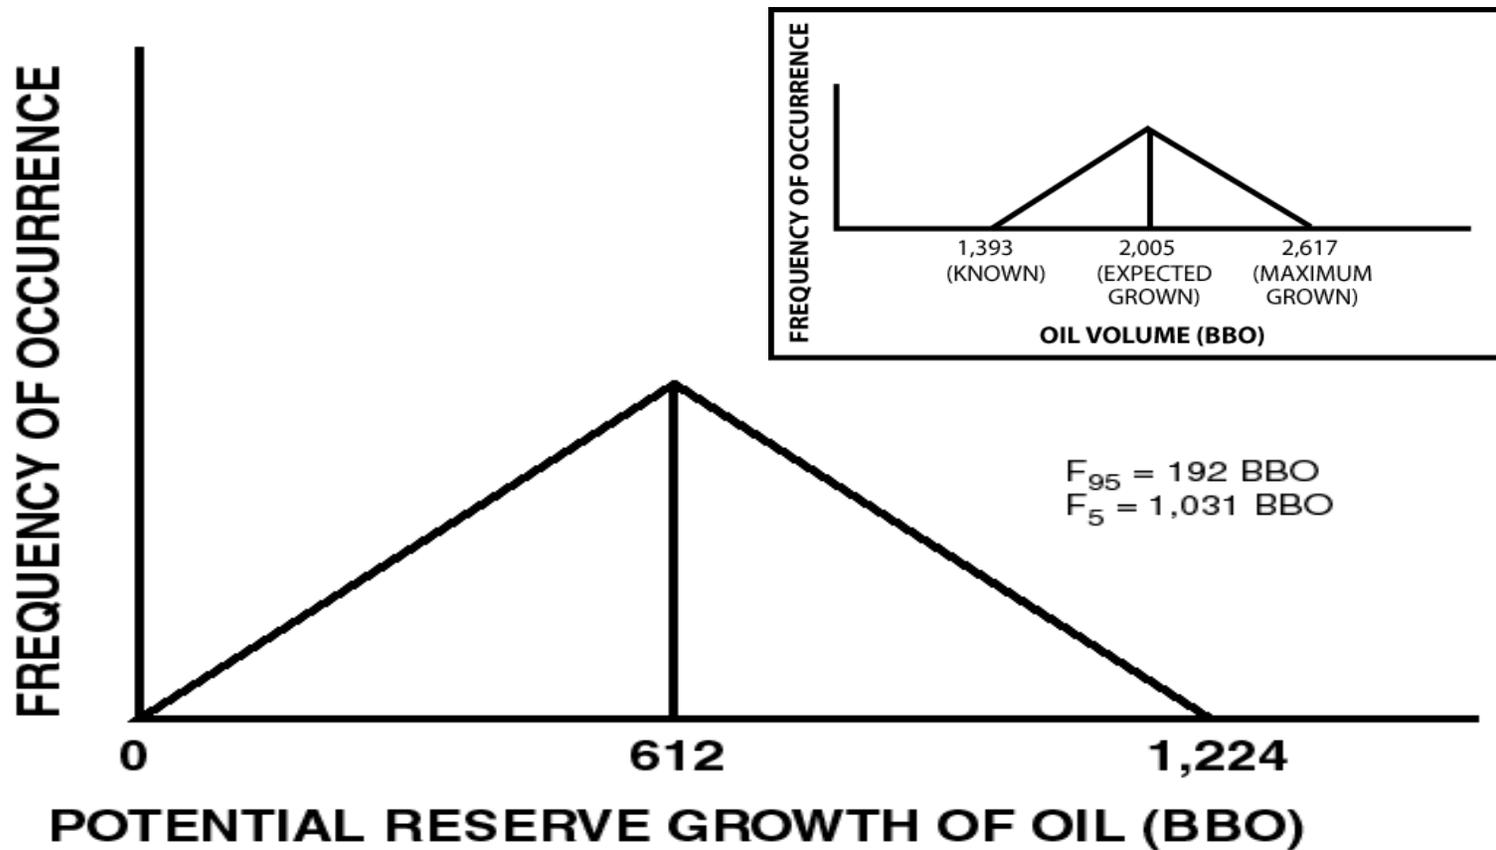

# RESERVE GROWTH OF WORLD'S LARGEST GAS FIELDS (>3 TCF [preliminary analysis])

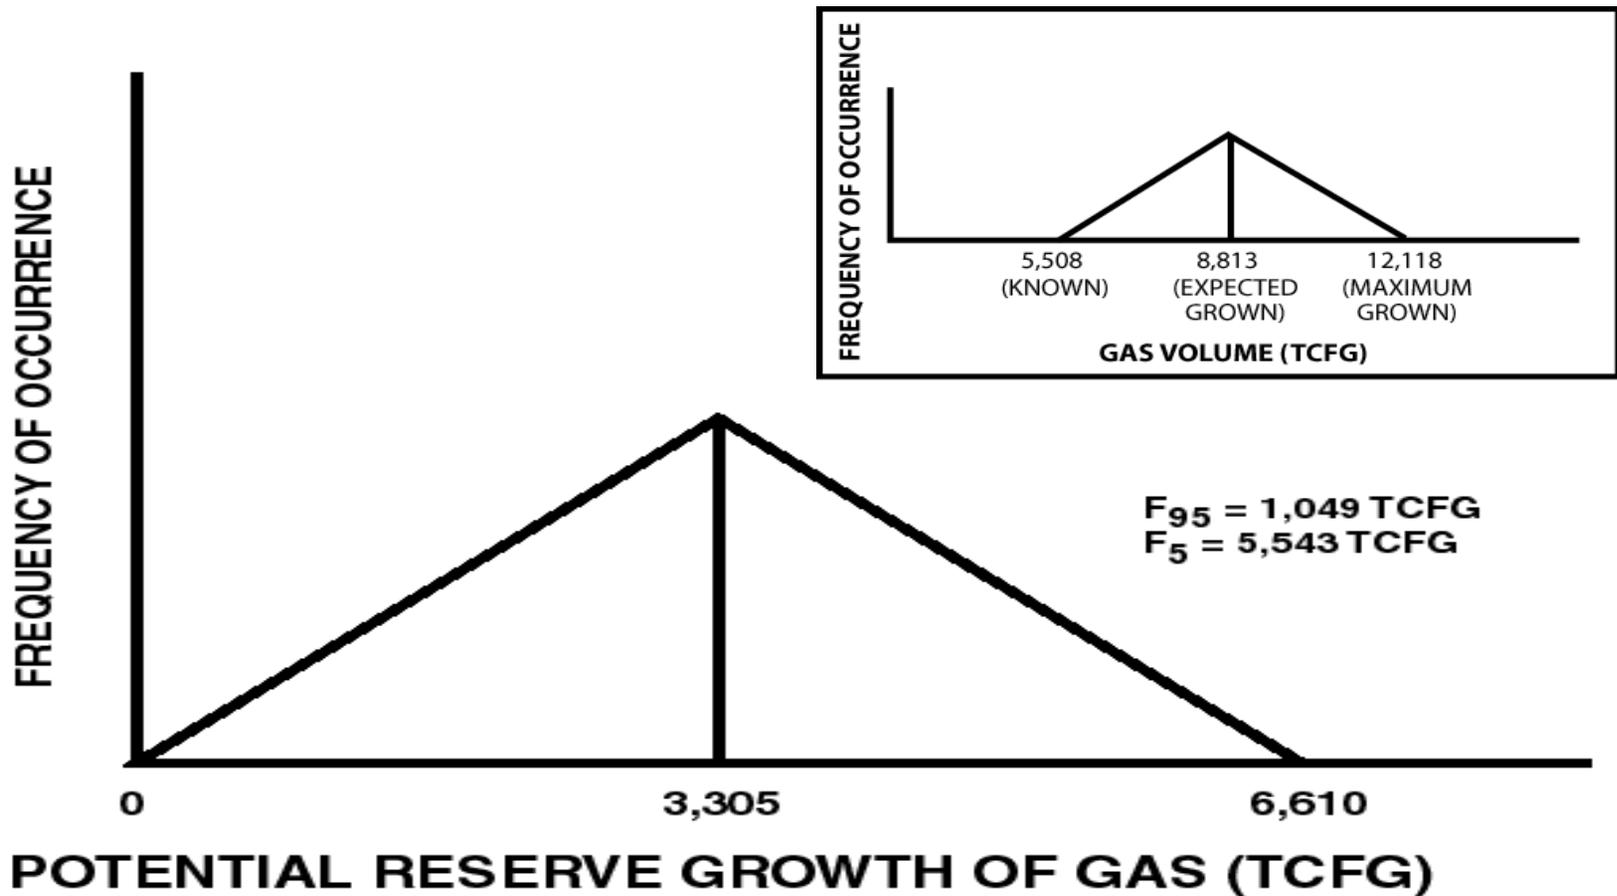

# RESERVE GROWTH OF WORLD'S LARGEST GAS FIELDS (>3 TCF [preliminary analysis]), EXCLUDING NORTH FIELD

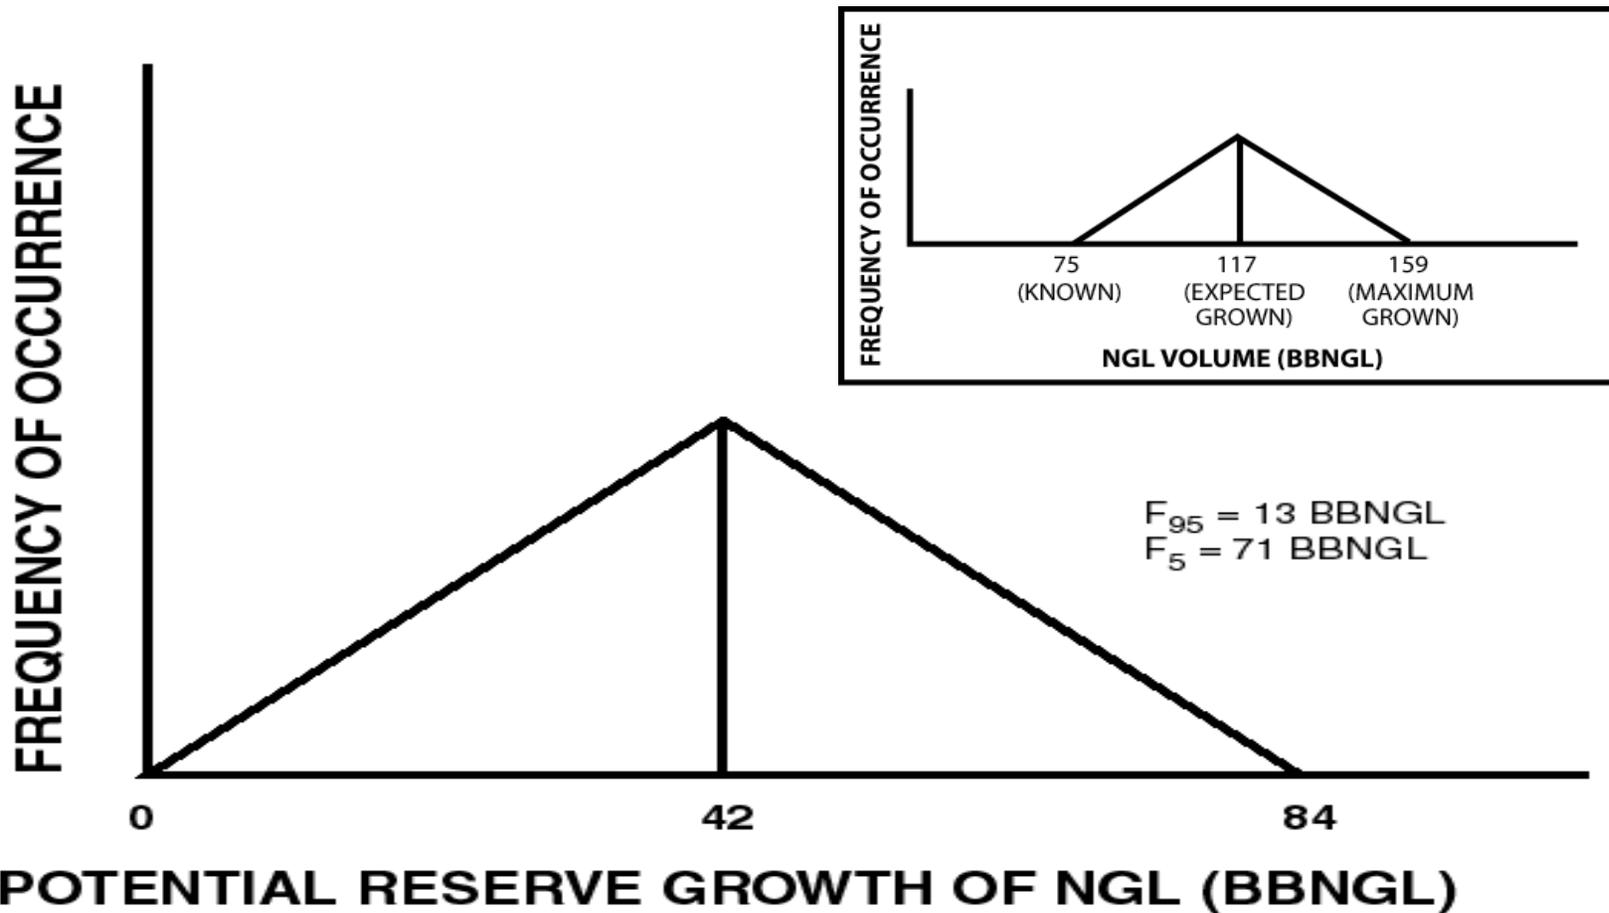

# World Potential Reserve Growth Oil

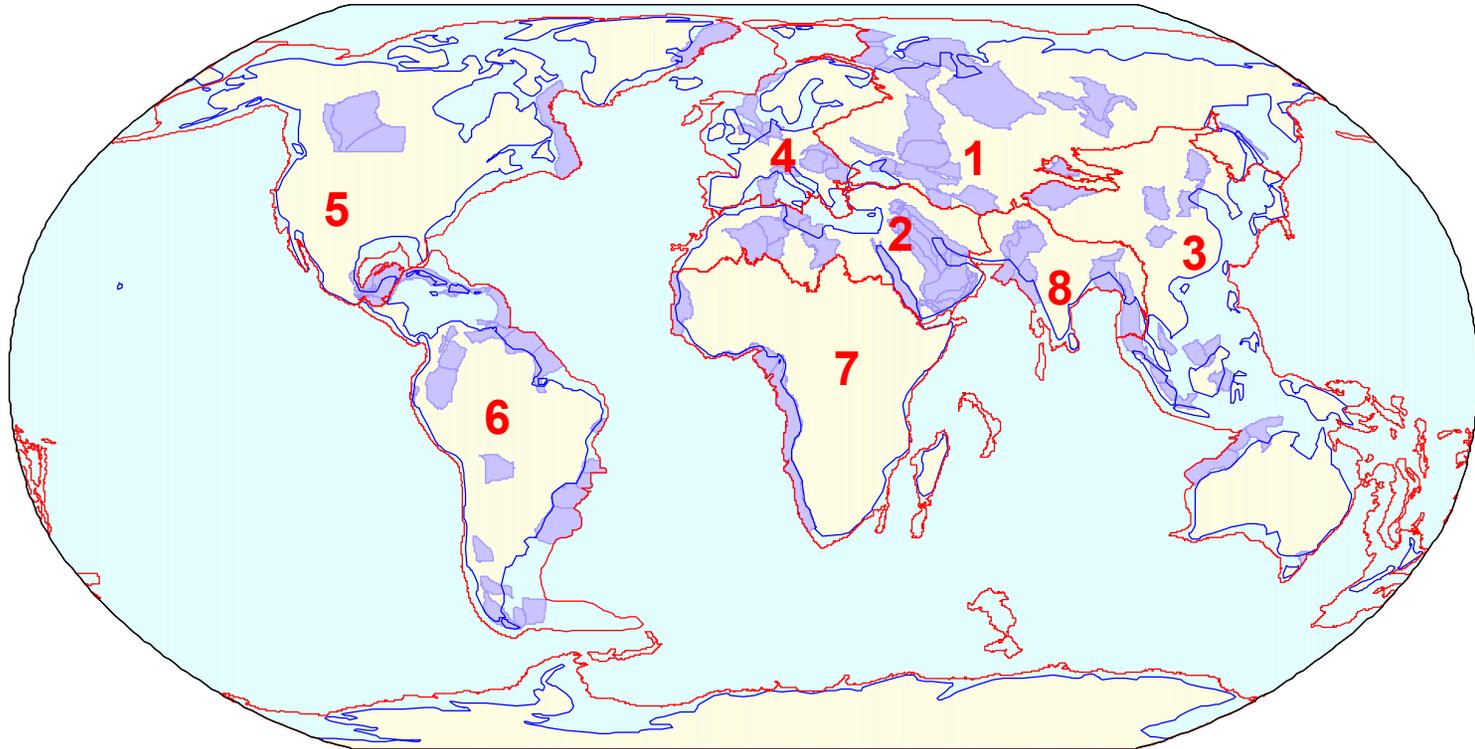

# World Potential Reserve Growth Gas

# World Potential Reserve Growth NGL

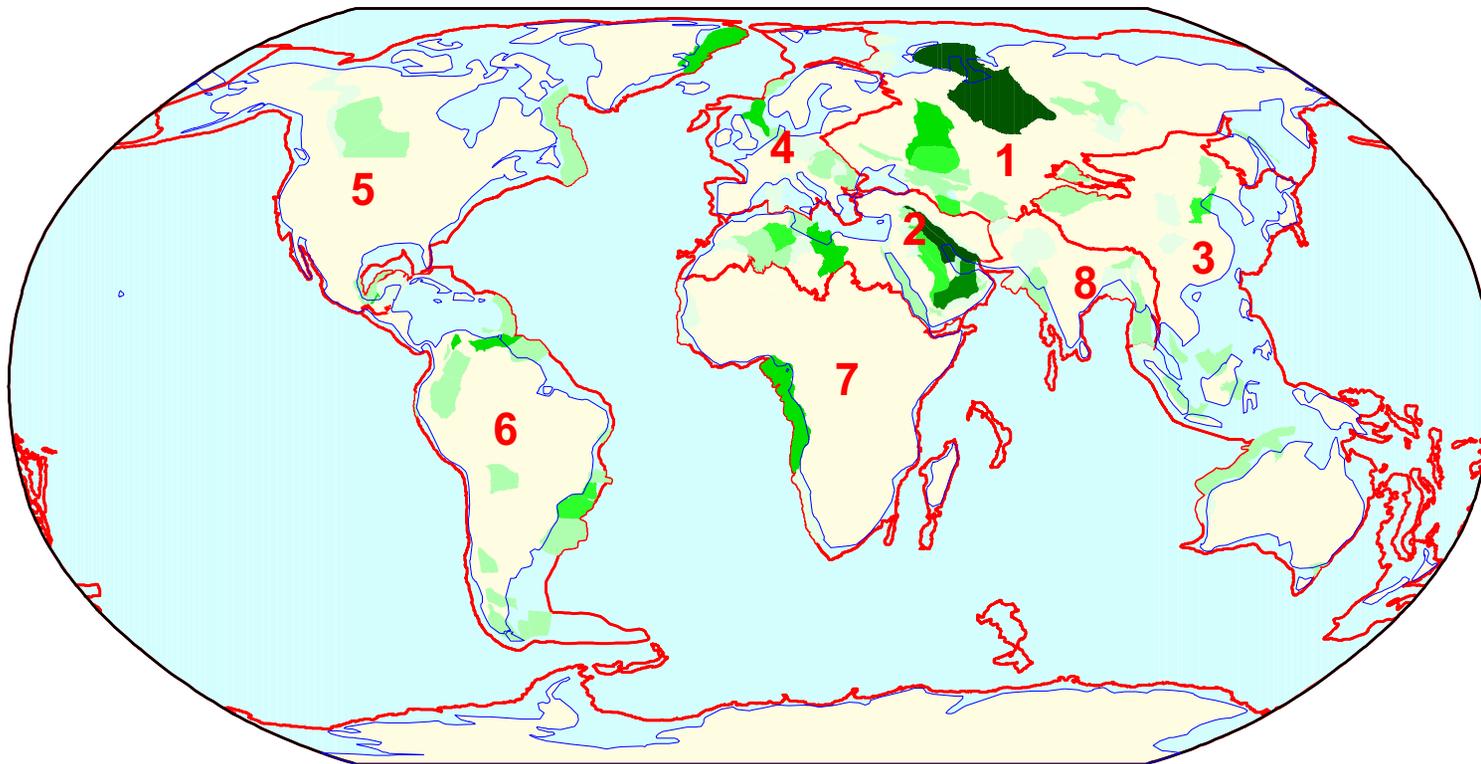

## Assessed Geologic Provinces

### REGIONS

- 1 Former Soviet Union
- 2 Middle East and North Africa
- 3 Asia Pacific
- 4 Europe
- 5 North America
- 6 Central and South America
- 7 Sub-Saharan Africa and Antarctica
- 8 South Asia

 Assessed geologic province

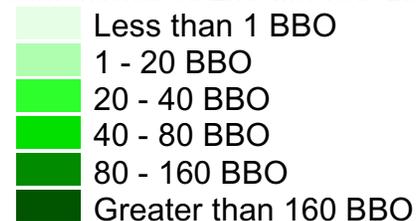

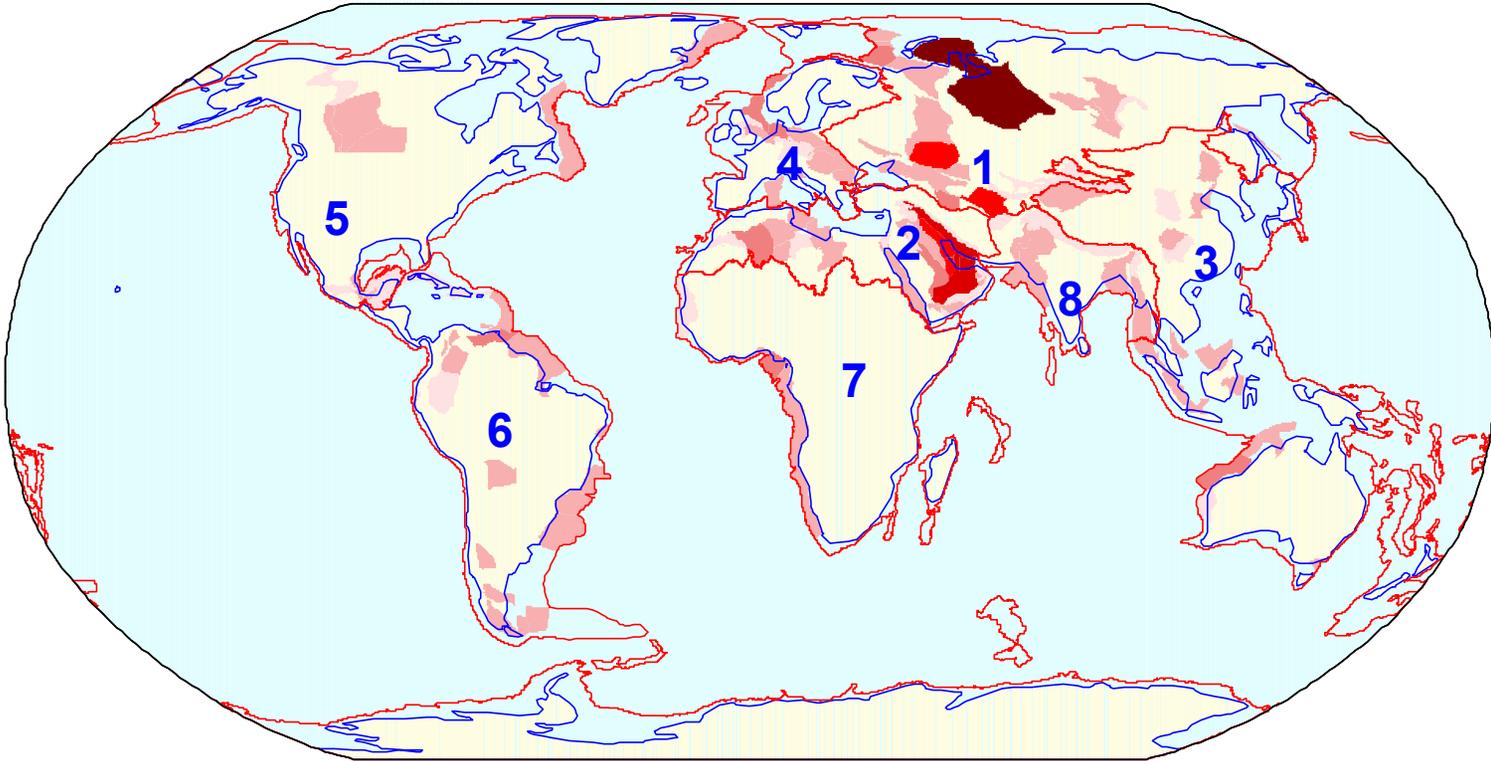

## Conventional Oil Endowment of the World by Province

### REGIONS

- |                                |                                     |

# Number of Fields Per Size Class

## The World

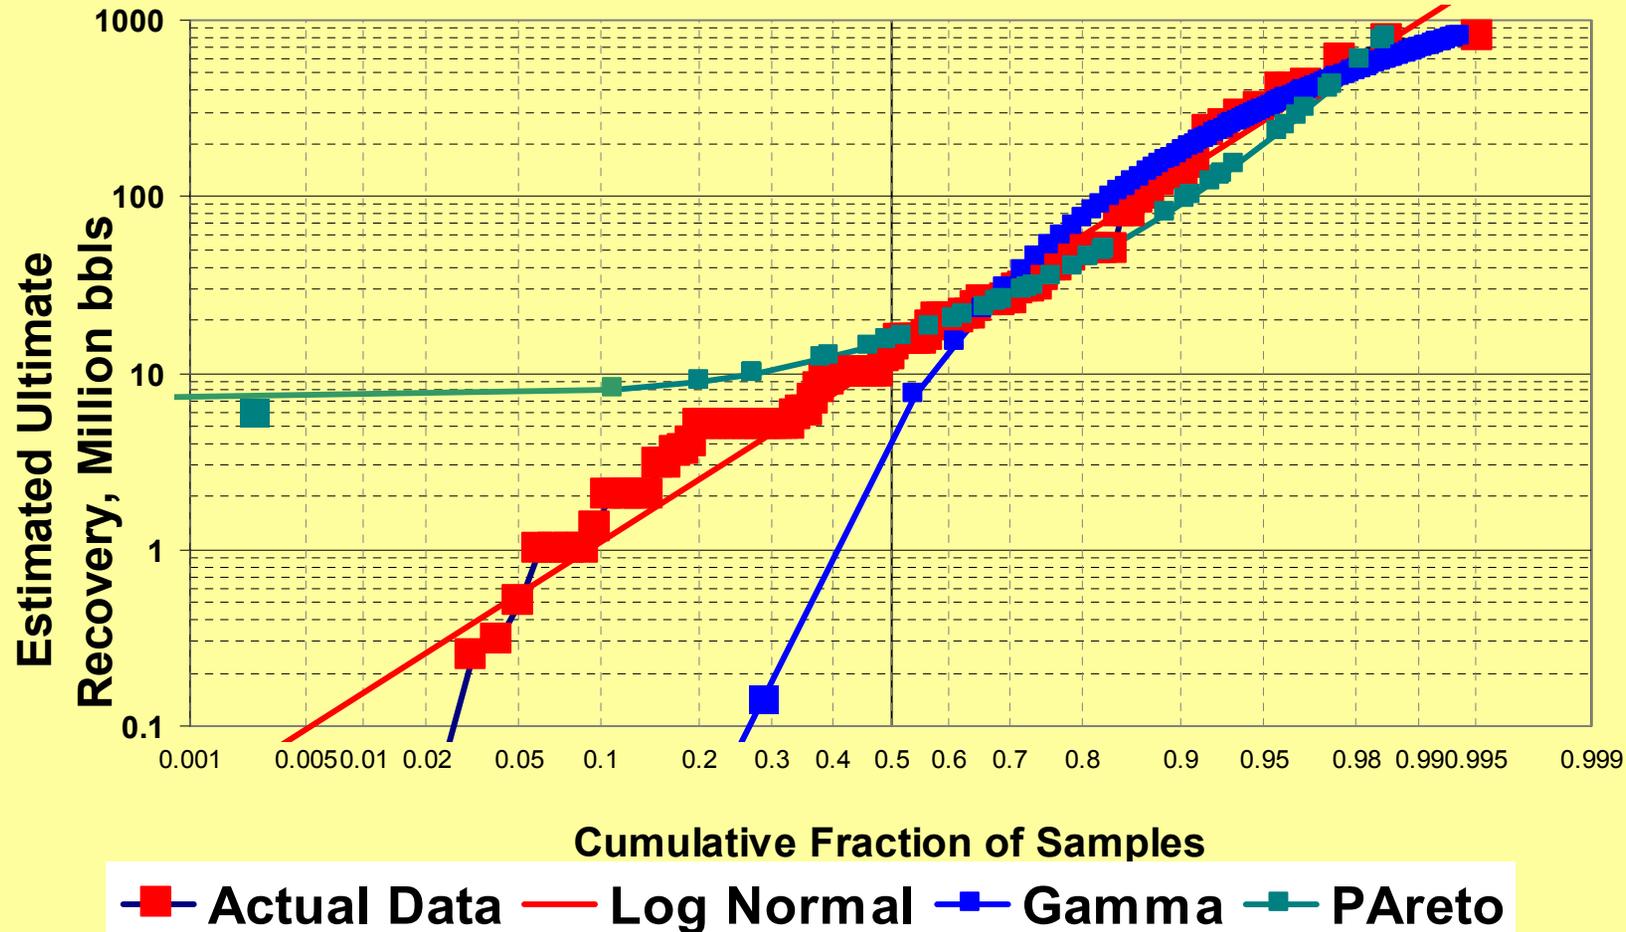

# Known Volume Per Size Class

## The World

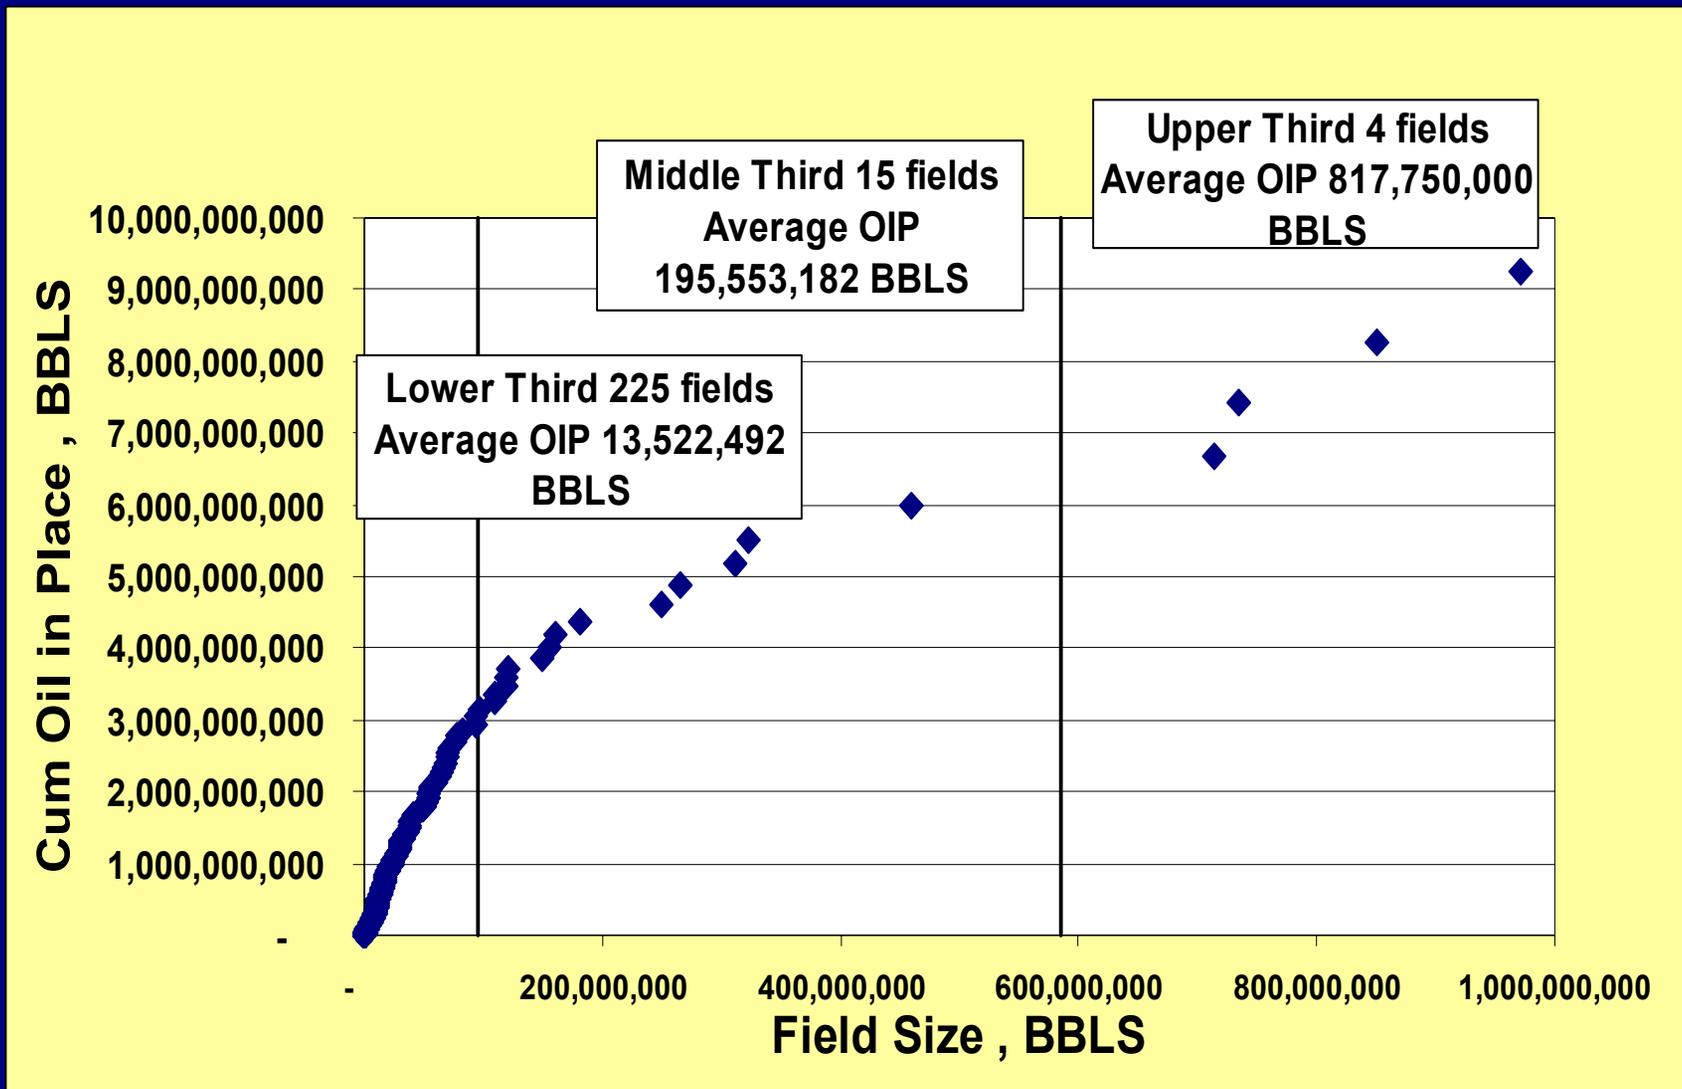

# Trias-Ghadames

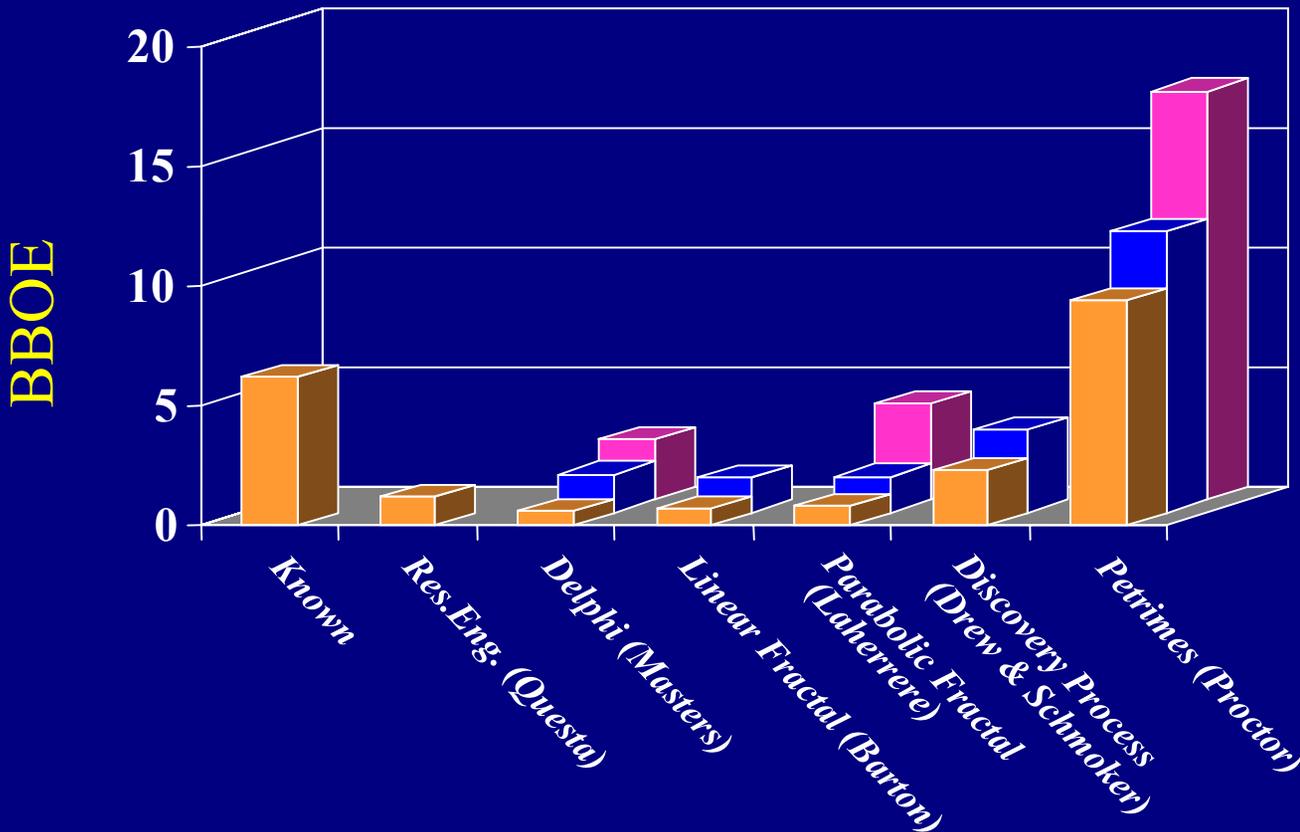

## Best Fits with various Distributions

# Neuquen Basin--Oil in Place

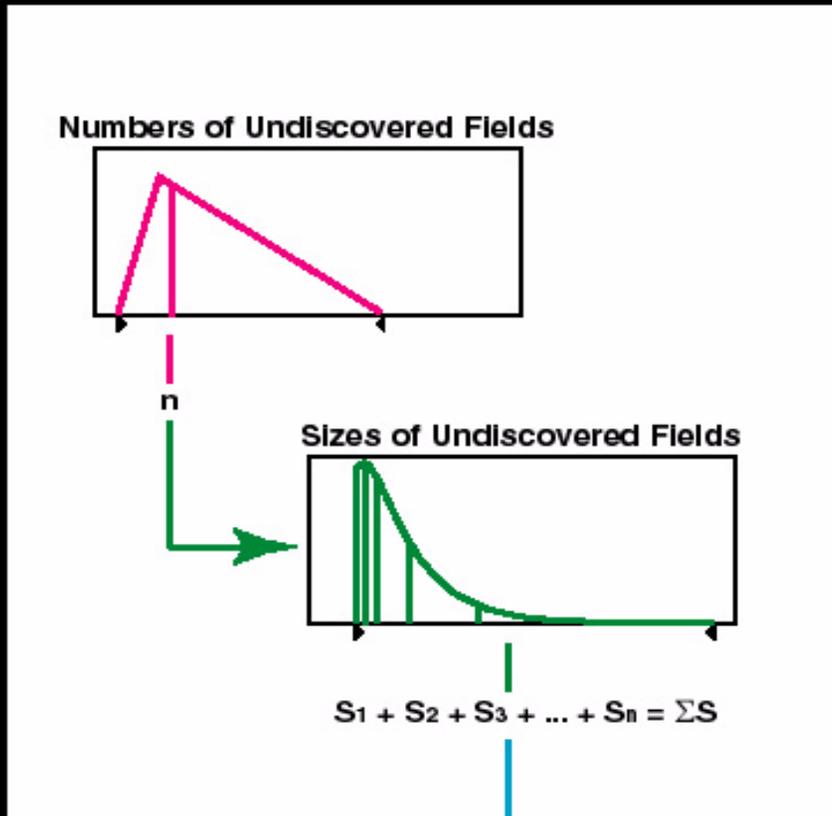

# Neuquen Basin, Argentina Comparison of Resource Estimates

Assessment Comparison 209 Fields > 1 MBOE, 1,041 Wells,  
Petroconsultants, 1996, Rank 61st in World

# Monte Carlo Simulation for the Assessment of Undiscovered Resources

Repeat 50,000 Times

Forecast: Undiscovered Resource

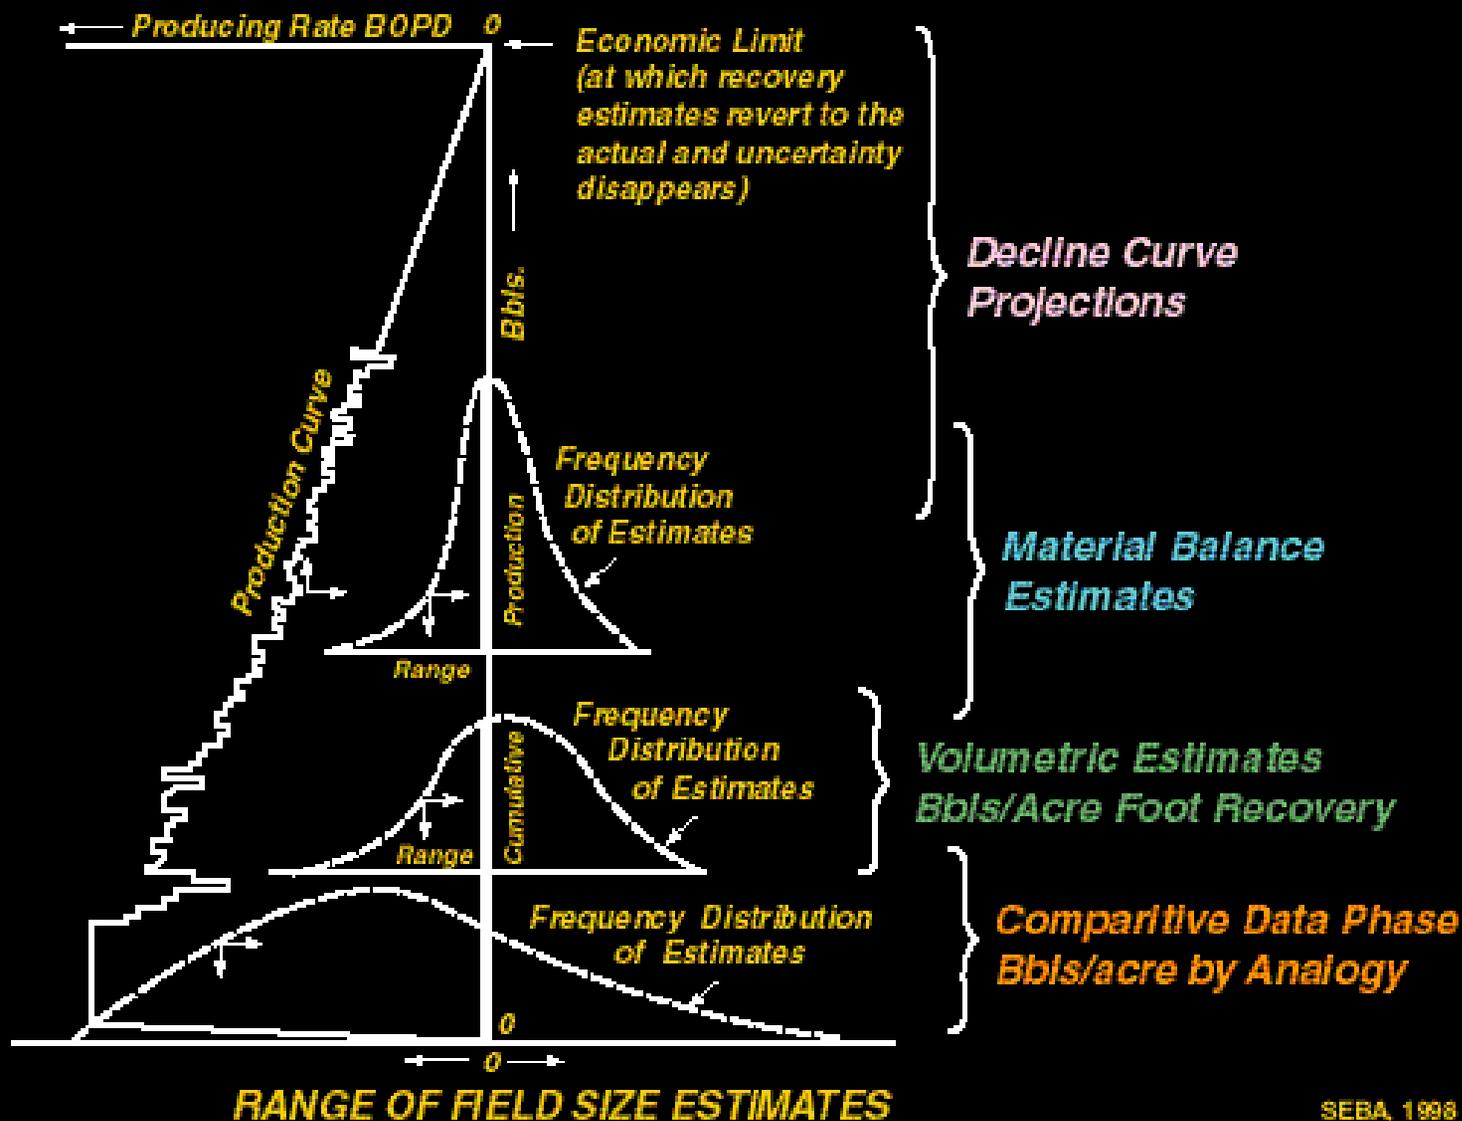

# Production Profiles Probability vs. Functions

## BEWARE:

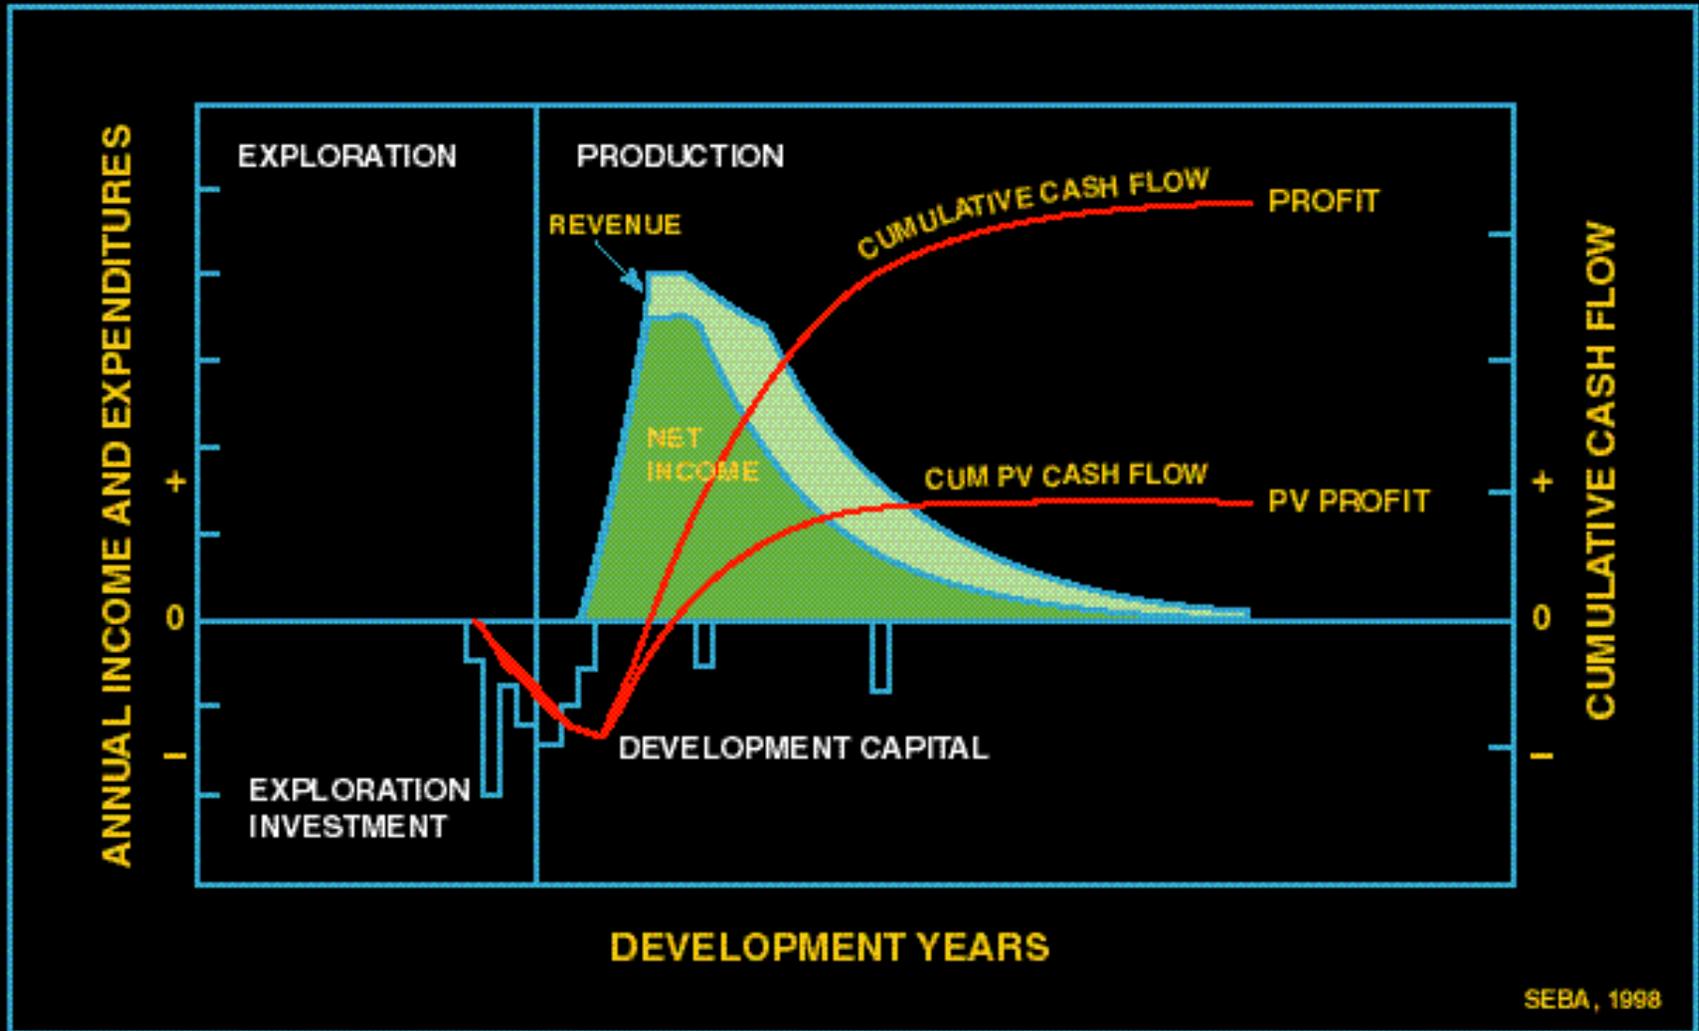

- We are NOT aggregating probability distributions (Central Limit Theorem)
- We ARE summing mathematical functions
- Production =  $f$  (time)
- Initially skewed distributions retain their skewness at successively higher aggregations

from previous assessments

# Summary

- Estimates (mean) of Undiscovered Petroleum are up (+9.5% overall; oil +24.3%, gas -10.4, NGL +104%) relative to 1994 USGS estimates
- **Field Growth** is significant (612 BBO, 3,305 TCF Gas at mean). Large growth potential in Iraq, Iran, Saudi Arabia, Volga Ural, West Siberia, Algeria as supported by detailed, proprietary studies
- OPEC undiscovered resources largely onshore, OECD and others largely offshore and undiscovered resources less concentrated in OPEC compared to previous estimates
- U.S. Reserves—surprising ~12% of world endowment, but troubling recent downturn
- Our understanding of petroleum systems is just beginning challenging our preconceptions and encouraging needed research into gas systems, unconventional

# Summary (2/2)

- Significant giant fields missing in database—East Siberian Basin
- **Stranded gas; natural gas is underdeveloped and under-reported--many continuous occurrences**
- Unconventional resources- 17 identified but not assessed; will be assessed in next phase. Heavy oil and abnormally pressured, low contrast/low resistivity (LC/LR) offer opportunities for current technologies (e.g. Algeria), many basin-center, coal bed methane, and gas hydrate deposits known
- Boutique province opportunities—2<sup>nd</sup> largest volume of estimated undiscovered oil assigned to Greenland. 52 such “boutique” provinces including India/Bangladesh, North Africa (Murzuk, Senegal)

U.S. Geological Survey  
World Petroleum Assessment 2000

# Summary

- Total world endowment of oil is +20.5% above previous (1994) estimate
- Total world endowment of gas is -14.1% below previous estimate
- OPEC share of world petroleum endowment is down slightly
  - 47% of undiscovered oil and 53% of undiscovered gas are offshore

# USGS World Petroleum Assessment 2000 Summary

## Reserve Growth

- First time assessed for world
- Nearly as much as undiscovered resources

## Mean Estimates

- Oil Reserve Growth (612 BB)
- Natural Gas Reserve Growth (3,305 TCF)
- NGL Reserve Growth (42 BB)

# World Energy Project

- General Project Overview
- Project Planning
- Prioritization
- Teambuilding
- Internal Training
- Publications
- GIS protocols
- Data Security / Databases
- The "Assessment Bible"
  - 7th Approximation Form
  - Total Petroleum System Write-ups
  - Definitions/Procedures
- External Calibration
  - World Energy Consortium
  - AAPG Core Methodology Review
  - NRC Reviews
  - Intelligence Community
  - Media--"The Upcoming Crisis"

# USGS World Petroleum Assessment Process

- GOAL: ASSESS TECHNICALLY RECOVERABLE CONVENTIONAL OIL AND GAS RESOURCES OF THE WORLD EXCLUDING U.S.
- 5 YEAR PROJECT--1995-2000
- METHODOLOGY AND RESULTS THOROUGHLY REVIEWED BY CONSORTIUM PARTNERS (industry, government, associations)

# USGS World Petroleum Assessment Process

- USE GEOLOGIC BASIS (PROVINCES, TOTAL PETROLEUM SYSTEM AND ASSESSMENT UNIT)
- ESTIMATES OF "UNDISCOVERED" RESOURCES BASED ON UNDERSTANDING OF PETROLEUM FORMATION PROCESSES
- ESTIMATES BASED ON "BEST-AVAILABLE" DATA: SNAPSHOT IN TIME
- RESULTS ALLOCATED TO COUNTRIES, ONSHORE / OFFSHORE, OPEC, OECD, OTHER

# USGS WORLD ENERGY PROJECT

- 5 YEAR PROJECT -- 1995-2000
- EXTENSIVELY REVIEWED
- ASSESS RECOVERABLE UNDISCOVERED CONVENTIONAL OIL AND GAS RESOURCES OF THE WORLD
- 30 YEAR TIME FRAME (1995-2025)
- GEOLOGICALLY BASED ASSESSMENT
- ALLOCATION TO COUNTRIES, ONSHORE / OFFSHORE, OPEC, OECD, OTHER
- RESERVE (FIELD) GROWTH ESTIMATES (30 Year Forecast)
- ALL INFORMATION IS DIGITAL <http://energy.usgs.gov>

# Provinces

- 1st step, ranking of provinces; 2nd step, identifying and mapping petroleum systems; 3rd step, assessing total petroleum systems.
- 954 Geologic Provinces—prepared digital maps of comparable geologic attributes at scale of 1:2.5M or 1:5M and released on CD-ROM (over 50,000 distributed in Open-File Series 97-450)
- Allocation of 32,695 oil and gas fields (Petroconsultants, 1996; Nehring, 1996) to 409 petroleum provinces
- 76 Priority Provinces—contain 95% of known petroleum reserves (exclusive of U.S.)--14,185 fields (U.S. Provinces from 1995 USGS assessment)
- 52 Boutique Provinces—expensive places to look, but you can get some nice surprises

# TOPICS

- World Energy Assessment (U.S.G.S. National Assessment Link; Free CD's)--Conventional (EMC<sup>2</sup>), **FORSPAN** Unconventional.
- Many unconventional opportunities in the World-- e.g. LC/LR Algeria, basin center gas--Barents, NW Shelf Australia, China; heavy oil-- E. Siberia, Orinoco, self sourced oil--Domanik (Devonian), Knieper Donets, Timan-Pechora
- Technologies utilized in the U.S. are well suited for unconventional gas (Paleozoic--Middle East, China, South America) and oil (Devonian--Volga-Ural, Algeria)
- Conventional Resources--field growth, new discoveries

# Assessment Issues

- Region 5 estimate is down (Canada, Mexico—assessments down)
- Total oil is up due to South Atlantic deepwater and higher assessments in Middle East
- Total gas is down due to lower assessments in Barents, West Siberian Basin, China
- Total NGL up because co-products were not previously assessed
- Overall undiscovered volumes are reasonably close to previous assessments

# Assessment Issues (Cont.)

- Natural gas issues—database, lack of development
- Although reserve (field) growth adds considerable resources, the World is basically fairly mature
  - 75% of our oil endowment is known
  - 66% of our natural gas endowment is known

# Unresolved Issues

- Is there an impending oil crisis due to lack of discoveries?
- Virtually every preconceived notion we held regarding petroleum systems was challenged by our work (We'll look at the components to demonstrate)
- Our understanding of the origin, migration and accumulation of petroleum resources is immature—particularly for natural gas
  - Conventional / unconventional gas linkage
  - Isotopic fractionation, long term preservation
  - Unknown processes—Amu Darya, South Caspian

# Unresolved Issues (cont.)

- Many unconventional opportunities in the World, e.g.--
  - LC/LR Algeria
  - Basin center gas--Barents, NW Shelf Australia, China
  - Heavy oil--E. Siberia, Orinoco,
  - Self sourced oil--Domanik (Devonian), Knieper Donets, Timan-Pechora
- Technologies utilized in the U.S. are well suited for unconventional gas (Paleozoic--Middle East, China, South America) and oil (Devonian--Volga-Ural, Algeria)
- Conventional resources--field growth (more detailed region and province level work), new major discoveries are increasing not decreasing

# Future World Energy Studies

- Plan for subsequent project
  - Continuous accumulations--GERC cooperation
  - Deltas
  - Deepwater sediments
  - Natural gas
  - Field growth--detailed petroleum engineering studies

# Questions for the Future of Energy:

1. How much of the world's substantial oil and gas resources are economically recoverable?
2. How much of South American and African offshore resources will be developed? Greenland? When?
3. Who will develop those huge offshore resources, especially in hostile environments? Will ocean production rules change?
4. How will the U.S. meet its natural gas demand? What role will Canada play?
5. How will unconventional resources evolve and develop?
